

The Corta-Flx® Story

Millions Sold Worldwide To Leading Horsemen Of All Disciplines

Celebrating Our 10th Year Anniversary

We introduced our original Corta-Flx® First-Of-Its-Kind formulation to the Equine Industry ten years ago. After years of research, we developed the unique Corta-Flx® formulation of micro-sized isolates comparable to the key active ingredients found in Chondroitin and Glucosamine. Such small micro-sized isolates penetrate the horse's cellular walls more efficiently than larger ones, thus providing quicker and more effective nourishment to affected joints. Corta-Flx® worked so well on the horses that were tested, that we guaranteed dramatic results in 5 days on the label. A competitor using the generic Chondroitin and Glucosamine ingredients in their products stated the "idea that a joint supplement can respond to treatment and heal in under 5 days is patently ridiculous." Our competitors product labeling and literature stated it may take weeks before you see any improvement at all. Some even had Corta-Flx® tested for MSM, phenylbutazone, and DMSO. Test results were negative for such ingredients. *The Horse Journal* tested Corta-Flx® and other joint products in the marketplace for comparable effectiveness. *The Horse Journal* said at the beginning of their testing they were also skeptical of our Guaranteed 5 Day Dramatic Results. After completion of product testing, *The Horse Journal* concluded and published that the dramatic results were achieved in only 3 days. *The Horse Journal* proclaimed Corta-Flx® as the Equine "Product Of The Year."

Michigan State University performed a clinical double-blind placebo study proving Corta-Flx® isolates improved joint mobility in horses with degenerative joint disease (DJD). For a complete review of the Corta-Flx® Research as it was presented to the Convention of the American Association of Equine Practitioners (AAEP) in Orlando, Florida, visit:

COMPETITOR CHALLENGE

Ask our competitors for proof that their products really work. They only boast about reviewed evaluations of the generic ingredients Glucosamine and Chondroitin in their formulations as proof their product works.

**Smaller
Micro-Sized Isolates
Penetrate Cellular Walls
More Effectively
Than Larger Ones**

OUR ORIGINAL FORMULA NOW WITH HYALURONIC ACID

Recently the original Corta-Flx® formulation was taken to a new level. The clinically-proven Corta-Flx® formulation of micro-sized isolates was enhanced with a vegetable-based source of 40 mg low molecular weight Hyaluronic Acid (LMW-HA) per serving. HA plays an important fundamental role in maintaining the integrity of healthy joint cartilage and synovial fluid for proper lubrication.

3 GREAT FEEDING OPTIONS AVAILABLE • SOLUTION • POWDER • PELLETS
