

Sea-Monkey Instructions

- Rinse out your tank several times in hot water.
- Fill the tank with bottled drinking water or boiled tap water. Fill to 1.2cm from top of tank.
- Pour Pouch #1 Water Purifier into tank.

- Stir the powder for approximately 1 minute, until the powder is dissolved.
- Let the tank stand for 24 hours at room temperature.

- Pour Pouch #2 Sea-Monkey Instant Live Eggs into the tank.
- Stir the powder approximately 1 minute, until the powder is dissolved.

- If you look carefully, you will see your new Sea-Monkey babies hatching before your eyes. Use the magnifiers to get a closer look.
- Keep the lid on the top of the tank. This will keep the water from evaporating.

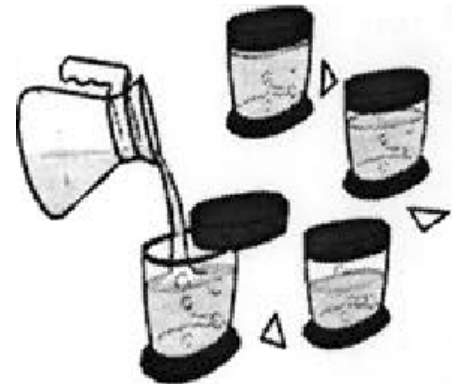

- Keep your tank out of direct sunlight, but in a room where there is indirect light.

- After 5 days, you will need to feed your growing Sea-Monkeys. Use the small scoop on your feeding spoon, add 1 scoop from Pouch #3 Sea-Monkey Growth Food.
- Feed approximately once a week. If the water is getting cloudy, you are feeding too often. As your Sea-Monkeys

get bigger, in about 1 month, they will need more food.

- The water in your tank will slowly evaporate. When the water level in your tank has gone down 25cm, refill with boiled or bottled water.
