TS-1

NSA Evaluated Hard Drive & Tape Degausser

NSA /CSS Compliant Degausser

Most NSA Evaluated high security degaussers are tied to a single permanent structure because of their size, weight or calibration requirements. Garner has perfected the portable degausser with its popular HD-3WXL series.

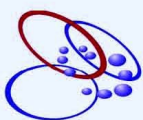

The TS-1, an NSA Evaluated degausser, is a ground breaking design that takes the proven solid state technology from the Garner HD-3WXL, enhances the power and delivers it in a streamlined ultra-portable package. In addition, a built in calibration and redundant check system assure that each degauss cycle delivers the same power. There is no need for a separate instrument to check the power of the magnetic field.

TS-1 Features:

- 2 Tesla (20,000 Gauss) of Power
- LCD Display
- Continuous duty
- 45 second cycle time
- Built-in Magnetic Field Verification
- Quiet, Office Friendly Operation
- Erases highest coercivity hard drives & tapes
- Solid State Design
- Microprocessor controlled

Eliminate the risk of information loss during media transportation. Take the TS-1 degausser directly to the location of your media. The TS-1 has two custom machined retractable alloy handles built in to each side of the unit for easy transport. An optional custom wheeled transport case is available to get the TS-1 from job to job safely and securely.
