What's in the box:
1 Tent Body, 2 Tent Poles, 1 Tent Fly, 2 Fly Rods
1 Carry Bag, 1 Pole Bag, 1 Stake Bag/ Stakes

Spread the tent out with the top side up.

Assemble the long poles. Attach them to the ring/pins diagonally across the tent body.

Insert the pins into the bottom ferrules.

Assemble the long poles. Attach them to the ring/pins diagonally across the tent body.

Clip the tent body to the poles.

Raise the poles and attach the tent where they cross.

Then dress out the tent as you stake down each corner ring.

Lay out the fly with the bottom side up. Assemble and slide the fly rods into the pockets. Wrap the hook & loop tabs around the rods.

Turn the fly over and drape it across the tent so that the yellow webs meet. Reach under the fly and wrap the hook & loop tabs around the tent poles.

Attach the J-hooks from the fly to the corner rings. Then guyout and stake down the fly.
STAKING:
All tents need to be staked down to keep them from blowing away. Securing the tent by placing heavy objects inside is just not adequate.

• Once the tent body is erected, stake it out before the fly is put on. This enables you to square the tent up to ensure that the fly goes on properly and that the seams align with the frame. Pull the base of the tent taut between each stake staked out or loop & pin. Make sure that all corners are square. It is important that you don’t stake too much too tightly. You will know it’s too tight if the door zippers can not be easily operated. Drive stakes through the web loops, or with loop & pin, drive the stake just outside the ring so that the “J” hook catches it. Tie a piece of cord or web into a loop through the ring to be used as a large stake loop if needed.

• With the tent properly staked, drape the fly over the frame, attach its tent connection points and stake down any pull outs.

• Do not attempt to remove the stakes by pulling on the tent bezel loop, as this could cause the fabric to tear. The best way is to pry on the stake itself.

Staking in special conditions:
• Sand. Use long, hard stakes with plenty of surface area in loose soil.
• Hard, Rocky, or Frozen Soil. Steel stakes work best. Store steel stakes separately. Their sharp edges can cut fabric and leave rust points, which might damage your tent.
• Snow. Use “deadman” anchors. Tie tent to buried objects (branches, tent bags, or stuff sacks filled with snow; or tie tents to snow shoes, skis, or ski poles, which are stuck in the snow).

CONDENSATION & VENTING:
Through perspiration and breathing, an adult gives off about a pint of water over 24 hours in the form of breath, perspiration and excretion of body fluids. Most often, water found in the tent is a result of this condensation rather than from the tent leaking. Condensation often forms when the sleeping bag touches the roof, under the sleeping pad, or on coated surfaces such as the door flaps. A tent’s double wall construction allows the vapor in very humid or extremely cold conditions when the permeable roof is less effective. The features that enhance ventilation are windows, short-sheeted flys (bottom venting), roof vents, and High/Low venting doors. These are specific to each tent model.

Given the importance of proper ventilation, we use High/Low venting in most of our tents. This allows cooler air in through the low vents and warmer, moist air up and out through the high vents. High/Low venting is accomplished within the inner tent via roof vents, doors and windows. It is important to vent the vestibule. Unvented, it can inhibit airflow into the tent.

Our tent vestibules profit from the ability to “short sheet” by means of our tent vestibule doors. This design allows increased airflow into the tent from the bottom. Open the low vent/window to admit cool air, allowing the warmer air out through the high roof vents. When rain and wind prevent the low vent from being opened, the High/Low vent can still be used. Fly overhangs or vestibules protect the low vent.

ULTRAVIOLET LIGHT:
 Ultraviolet light damage to tent fabric is caused by excessive exposure to sunlight. While our fabrics are UV resistant, any synthetic fabric is susceptible to UV degradation. UV damage will cause nylon and polyester to become brittle with exposure. Avoid treating your tent with the use of the tent in direct sunlight. You can increase the life of your tent by keeping it off the ground and out of the sun.

GENERAL POLE CARE:

• Never let tent poles snap together as this can damage the pole ends.
• Do not snap tent poles or bag ends on their ends; and do not store tent poles in your packed back on end loops. This can cause the tent poles to break.

Our tent window frame may bend slightly and take a “set” through usage; this normally does not affect the performance of the frame.

GENERAL TENT CARE:

• Sweep the tent floor daily to prevent damage from stones.
• Try not to wear shoes inside your tent.
• Use a ground cloth whenever possible.
• Do not keep anything inside a tent. Hungy critters will chew through tent fabric in search of food.

STORAGE:
• Make sure the tent is completely dry, then store loosely rolled in a dry, cool place. To prevent dust from collecting on the tent, cover it with a cloth. This allows the nylon/polyester fabric to breathe.
• Ideally, the tent poles should be stored if they are fully assembled. This reduces the tension on the shock cord, prolonging its life.
• The tent bag should be used only as a carry sack and not for storage.

COLOR TRANSFER:
• Do to the nature of tent fabrics, color can transfer from darker to lighter fabrics when the two fabrics are in contact over time when wet, damp or exposed to the combination of moisture and high heat. This does not effect the tent’s performance. To prevent / minimize color transfer, always make sure your tent is completely dry prior to packing and storage.

• Clean the tent by setting it up and wiping it down with a mild soap (liquid hand soap) and lukewarm water solution. Rinse thoroughly and dry completely. Never use detergent, washing machines or dryers because they can damage the tent’s protective coating and seams. After cleaning, be certain the tent is completely dry, especially the heater, double-stitched areas such as the seams, before storing or mold / mildew are likely to grow.

• Check your tent regularly for any foreign substance to the tent fabric. UV damage can be minimized by cleaning the tent regularly.

LIMITED WARRANTY:
What is Covered: Johnson Outdoors Gear LLC warrants to the original purchaser that its products are free from defects in material and workmanship, for the life of the product, except as qualified below. The life of the product is determined by the Mixed Media Co. For tents, the life is until the tent is replaced, at which point the warranty is not transferred to the new owner. Johnson Outdoors Gear LLC shall not be responsible for any repairs that are not covered under the warranty. This warranty gives you specific legal rights, and you may have other rights that vary from state to state.

Our building quality green outdoor equipment goes back over 100 years, and eureka! is committed to being an industry leader in designing and producing high-quality equipment. Our mission is to provide outdoor enthusiasts with superior quality, durable, and reliable products that meet the needs of their outdoor adventures. From hiking to camping, our tents are designed to provide functionality, comfort, and durability in a variety of environments.

Basecamp: Free shipping on all products. We stand behind our gear and offer a no-hassle returns policy. If you’re not satisfied with your purchase, you can return it for a full refund within 30 days of purchase.

Backcountry: Free shipping on all orders over $50. We offer a 100% satisfaction guarantee on all our products. If you’re not completely satisfied with your purchase, you can return it for a full refund within 30 days of purchase.

What is Not Covered:
• Johnson Outdoors Gear LLC will not be responsible for any damage to the tent or other items that is caused by neglect or improper care.
• Johnson Outdoors Gear LLC will not be responsible for any damage caused by the use of parts or accessories not supplied by Johnson Outdoors Gear LLC.

How to Obtain Warranty Service: To return the product, freight prepaid, to the Dealer from whom it was purchased; or, contact our Customer Satisfaction Department for return authorization: toll free 1-800-572-8822. Collect shipments or shipments without return authorization cannot be accepted. The product registration card packaged with our product need not be returned for the warranty to be effective and for you to receive warranty service.

Repairs: If your Johnson Outdoors Gear LLC product needs service or repair due to the failure of its components, Johnson Outdoors Gear LLC, at its option, will either repair or replace the defective component. If you need repairs on your Johnson Outdoors Gear LLC product, please contact our Customer Satisfaction Department: toll free 1-800-572-8822.

How State Law Relates To This Warranty: This warranty gives you specific legal rights, and you may have other rights that vary from state to state.

We support the “Leave No Trace” Seven Principles:
1. Plan Ahead and Prepare
2. Travel and Camp On Durable Surfaces
3. Dispose of Waste Properly
4. Leave What You Find
5. Minimize Your Impact
6. Respect Wildlife
7. Be Courteous to Other Visitors
