# Weather Plus Pack™

## Flexible Weather Options for Ultimate Awareness

Jeppesen Marine is dedicated to providing navigators with key weather data at the right time and displaying it over navigation charts and routes for real-time analysis and trip planning. Our new weather options convert simple weather data into informative navigation features that will help you safely decide where to go and how long to stay on the water.

Both VNS MAX Pro and Admiral MAX Pro versions showcase our latest weather service offering, Sirius® Marine Weather. You may recognize the Sirius name as a leader in satellite radio. We are sure you'll enjoy the same level of excellence with their satellite-delivered weather data. This service results in informative, vivid weather data displayed over the navigation chart within moments after receiving data via satellite.

In addition to the Sirius Marine Weather service, the powerful XM® option allows streamed XM satellite weather data to be displayed in countless combinations within the navigation window.

Nobeltec Navigation Software also continues to support the built-in GRIB viewer to display predictive and actual data right over the chart. For economical and efficient data delivery, subscribe to OCENS® WeatherNet™, which is pre-installed in Admiral MAX Pro. See GRIB files instantly delivered and automatically opened via cell phone, satellite phone, or other Internet connection!

- ~ Integrated Sirius® Marine Weather and XM® Weather Overlay
- ~ Multiple Weather Providers
- ~ GRIB File Support
- ~ OCENS® WeatherNet™ integration (Admiral MAX Pro version)
- ~ Display Actual Weather and Predictions Over Intended Route
- ~ Cursor Rollover for Precise Values

Jeppesen is a Boeing Company

# Weather Plus Pack™

**Nobeltec Navigation Software supports multiple weather options. Choose from satellite weather overlay or free GRIB support.**

## Weather Plus Pack

For customers with Sirius® or XM® Satellite Weather hardware, this add-on plus pack allows your satellite weather data to render directly over Admiral MAX Pro or VNS MAX Pro navigation charts. Display wind, wave, pressure, and radar data (among many others!) while viewing world class navigation data. Sirius and XM Satellite Weather overlays require purchase of Jeppesen Marine's Weather Plus Pack and a compatible Satellite Weather hardware/data subscription.

## GRIB Weather File Support

Admiral MAX Pro and VNS MAX Pro can open and display GRIB weather files with ease, allowing you to view and step through predictions and actual data, right over the navigational chart. Supported data types include pressure, wind, currents, precipitation, wave information, and sea surface temperature.

## OCENS WeatherNet

Included with Admiral MAX Pro, the WeatherNet application is your gateway to over 20,000 GRIB and weather file forecast and actual reports via wireless and wired connections. WeatherNet offers thousands of continuously updated weather products—text, images, charts, buoy data, radar, GRIB files, and many more—that can be easily and efficiently downloaded on demand. Subscribe to the WeatherNet service and begin efficiently and affordably downloading GRIB files using your satellite or cell phone (or Internet connection).

## Minimum System Requirements\*

- Windows® XP Home/Professional or Vista™ †
- CPU: 1 GHz (Dual Core/ Dual Processor is supported)
- Memory: 1 GB RAM
- Hard Drive Space: 500 MB for NNS programs, plus 20 GB for charts and supplemental data
- Display: 1024x768 resolution, 32-bit color video
- Video Card: 64 MB RAM
- DVD Drive
- Serial or USB ports for GPS, radar, etc.
- USB port: At least one USB port for Hardware Key
- Mouse or other pointing device

## Recommended System Requirements\*

- CPU: 2 GHz
- Memory: 2 GB RAM
- Video Card: 256 MB RAM & OpenGL for each monitor
- Internet access for registration and to purchase software add-ons and charts

\* Higher system requirements may be appropriate if multiple advanced features are used concurrently.

† Latest Service Pack may be required for Technical Support troubleshooting
