

OCENS.Mail

Wireless Gateway

Wireless Email Faster — For Less.

? **Optimized for wireless applications**

Such as Globalstar, Iridium, Mini-M and cellular.

? **Transfers emails 20 times faster than with basic Outlook Express**

Example: Send 20 e-mails in less than 1 minute.

? **Works with your existing email software**

Such as Outlook Express, Netscape and others.

? **No limits on content or attachment size**

Full support for attachments and HTML messaging.

? **Server side virus scanning**

Scans every e-mail sent or received for viruses.

? **SMS Messaging Support**

Notifies your satcom phone when mail is available for downloading.

? **Server Side Filtering**

Users can determine the maximum size and type (html or not) of attachments they will receive via wireless modes.

? **Client Side Filtering**

Allows the user to limit the size of e-mail that should be downloaded via the wireless device.

? **Web Mail Access**

OCENS Mail also gives you the ability to access your account from a local café via the web.

Other Key Benefits

These key benefits are offered to OCENS Mail users:

- ? Full technical support (compare that to the competition!)
- ? PGP Encryption of E-Mail.
- ? Digital signatures.

How does it work...

The technology used in the OCENS Mail program is optimized specifically for E-Mail transfers. Many of our competitors offer compression technologies that fail to perform as well as ours simply because they blindly compress everything that comes over the line. OCENS Mail concentrates on optimizing only E-Mail transfers.

OCENS Mail is designed specifically to reduce the number of line turn arounds while additionally benefiting from compression. The proprietary E-Mail protocol eliminates ALL line turn arounds by sending large compressed streams of data to a server process running at our central location. The server unpacks the data stream and then carries out the standard SMTP "chat" to send the mail. Receiving mail uses the same wireless enhanced technology.

All incoming mail is collected by the server packaged into one compressed stream of data which is sent to the e-mail client in one unidirectional transfer. The E-Mail client parses through the data breaking it up into individual mail messages and presents them to you for viewing.

What does all this mean? It means that on average OCENS Mail is about 7 to 10 times faster than our competition when it comes to delivering E-Mail.

Wireless Interfaces

- ? Dialup cellular phone service.
- ? Cellular phones via data network.
- ? Iridium satellite service via direct dial or via the Apollo network.
- ? Globalstar satellite.
- ? Inmarsat all modes except "C".
- ? Geosat solutions.
- ? HF Radio via Pactor III through it's network of affiliate shore stations.

With plans for 3 months, 6 months, or 12 month service, you can pick the one that fits your schedule.
