Two Orange Headlight Covers (Black)  
Four Running Light Covers (Black)  
Nylon Kit Bag  
Mounting Screws  
Instruction Manual  
1-Year Warranty

Tactical vehicle operations at night can often be difficult due to a lack of illumination. Driving with just NVGs not only slows down your element's rate of movement, but also makes recognition more difficult and increases your risk of fratricide. U.S. Night Vision's Blackout™ Filter Kits for the HMMWV, Army 5 ton, Army 2 ½ ton and the Marine Corps 7 ton are an instant force multiplier for tactical vehicle operations.

Each Blackout™ Filter provides as much IR illumination, when seen through night vision, as a headlight seen by the naked eye at night; facilitating a safer, faster and more efficient means of travel.

The infrared headlight filters provide illumination for night vision. The taillight filters, also made of infrared material, allow brake lights to be seen by other vehicles. All running lights are covered with high impact plastic to mask light. Blackout™ Infrared Filter Kits are made in the USA and are available only to the U.S. Military and its allies.
