

# Trijicon®

SELF-LUMINOUS  
AIMING SYSTEMS

The Any Light  
Shooting Specialists

**Trijicon®**

## THE ANY-LIGHT SHOOTING SPECIALISTS

**W**elcome to Trijicon®  
Like many experienced shooters, you know that, no matter how well you can see the *target*, effective firearm aiming also requires that the *sights* or *reticle* be clearly visible. Trijicon meets this need with their family of advanced, ultra-high-quality, self-luminous aiming systems.

*Trijicon® - setting the world's standard for precision any-light aiming systems*

### A WORLD LEADER AND PIONEER

...in the development of self-luminous sights and scopes, Trijicon is dedicated to helping police, military professionals and sportsmen gain *maximum shooting accuracy* in any light. This dedication, along with optical excellence and uncompromising quality, is why more firearm manufacturers - such as Beretta, Glock, SIG and Smith & Wesson - offer Trijicon as original equipment than any other illuminated aiming system.

### ADVANCED TRITIUM- BASED TECHNOLOGY

Even in low-light or no-light conditions, Trijicon sights and reticles are made clearly visible by the luminescent combination of tritium, an isotope of hydrogen, and phosphors. Even in the miniscule amount required for sight illumination (less than that used to illuminate a watch dial), tritium glows brightly for a full *twelve years* without the aid of failure-prone batteries. The result is optimum, *dependable* any-light shooting accuracy.

### OPTICAL INNOVATION

Trijicon has led the industry in the development of any-light aiming optics, with several patents on its aiming products. The discovery of the Bindon Aiming Concept (BAC) opened the door to revolutionary products that facilitate both-eyes-open shooting, for more rapid target acquisition.

### UNCOMPROMISING QUALITY

Trijicon products are manufactured with the highest levels of workmanship and materials. Night sights are individually machined, and military scopes are typically made of high strength aluminum allows such as 7075. All sights and scopes must pass a thorough and demanding individual inspection. The result? Aiming products that reflect the pride of ownership characteristic of the world's finest firearm products.

**Trijicon®**

## THE CHOICE OF PROFESSIONALS AND SHOOTING EXPERTS

**M**ilitary combat personnel and police professionals know that their lives and the lives they have pledged to protect depend on how effectively they aim their weapons.

And whether carrying a weapon is part of your job or whether you target-shoot for pleasure, your firearm usage may well occur in low-light conditions. This is where Trijicon can provide the margin of success.

### The Any-Light Life Savers.

In protecting the public - or one's own home - the most threatening situations often occur after sundown. In the face of night-time aggression, protectors and defenders need every possible advantage. And a firearm is most effective as a deterrent when it can be accurately aimed.

*That's why Trijicon® products are the choice of many law enforcement agencies across the country.*

Trijicon® Bright & Tough Night Sights, for example, with their unsurpassed performance, toughness, and

dependability, are standard issue with many state police departments, hundreds of municipal and county departments, and several Federal agencies.

For home protection, these same qualities make Trijicon night sights the right choice. In a threatening situation, when so much is at stake, aiming equipment must be just as effective and dependable as the firearm it's mounted on.

Enthusiasts and competitive marksmen who use Trijicon equipment are well rewarded with high success rates, no matter what time of day they are shooting.

On the job, in the field or at the range, Trijicon gives you maximum accuracy in any lighting condition.

## Your Tactical Advantage for Special Missions

SWAT teams and other tactical units depend on a variety of Trijicon® sights and scopes for speed and accuracy in all situations - from close quarters to long range. ACOGs, for example, allow a high degree of discrimination, even among multiple, moving targets.

A specially modified Trijicon 4X32 ACOG and a Trijicon Reflex Sight were chosen by the U.S. Special Operations Command (SOCOM) as standard issue for all Special Forces Units, including the Green Berets, Navy Seals, and Rangers. These same models are now available for civilian purchase.

A proven edge in close-quarters combat...The Trijicon Reflex dual-illuminated advanced combat reflex sight lets personnel aim as fast as they can point, even in the dark. Illuminated both by light from the target area and from a tritium lamp, the Trijicon Reflex adjusts automatically

To take a trophy - early in the day, or late...

Hunters know that game animals are often most active and accessible in early morning or evening hours.

according to ambient light conditions. It provides optimum aiming-dot illumination for every shooting condition, while eliminating the need for battery power.

That's why Trijicon AccuPoint® riflescopes are illuminated with tritium and fiber optics for a wide range of light conditions. Accupoint riflescopes help even the odds - especially in low light or when speed is important.

So whether you measure success in lives saved, hit ratios or trophies...

*Insist on Trijicon Precision Aiming Equipment.*
