

EVAPORATIVE COOLING for ALL GOLF CARTS and
OTHER OPEN AIR VEHICLES from **PATIO COMFORTS**

"Thanks to your Air Tops, the last 4 years our summer business has doubled."

Paul Kreilick, Director of Golf Casa Blanca Golf Club Mesquite, Nevada

EVAPORATIVE COOLING *for* ALL GOLF CARTS *and* OTHER OPEN AIR VEHICLES *from* PATIO COMFORTS

Our golf cart air conditioner uses evaporative cooling to cool riders up to 25 degrees. It's quiet and efficient, carries enough water for a couple of rounds, and operates off the cart's batteries with no performance loss to the cart.

A high-velocity blower with directional vents blows cool air on both passengers allowing players to enjoy a round on even the hottest Summer afternoons.

The unit is seamlessly molded into a roof panel, that replaces the cart's existing roof panel, and can be painted to match if needed.

In most cases, the units will pay for themselves quickly through increased cart rentals and greens fees on hot afternoons when course traffic is hard to generate.

Whether you're buying for a whole fleet of carts, or an individual cart for personal use, you'll wonder how you ever got along without air conditioning.

KITS AVAILABLE FOR THE FOLLOWING CARTS:

- E-Z Go
- E-Z Go RXV
- Club Car PRE 2000
- Western
- Yamaha or Yamaha Drive
- Par-Car
- Club Car Post 2000
- Club Car Precedent

CUTOUT UNIT FOR OTHER VEHICLES:

Our custom cutout unit (*shown to the left*) is available for all other cart models, as well as open-air vehicles, like industrial lawn mowers, multi-passenger people movers, forklifts, tractors, earth-movers, etc. All you need is a roof able to support 35 pounds and a 12-16 volt DC power source.

FEATURES:

- Cools up to 25 degrees
- Quiet and efficient
- Uses tap water (*Fill with a garden hose*)
- Carries water for a couple of rounds
- Uses vehicle's batteries with no performance loss
- High-velocity blower with directional vents
- On-off rocker switch located by the vents
- Can be painted to match vehicle
- Low maintenance
- A one-year limited warranty

TWO ROOF LINE STYLES:

401 Model (*shown in photo on front*): has a clean and simple look, with the tank position 10 inches from the front of the roof.

601 Model (*shown here*): is based on the ever popular custom Club Car canopy. The tank position is 14 inches from the front of the roof.

NOW AVAILABLE! All-In-One Model with Air Conditioning AND HEATING in a Single Unit. Not Available for Gas Carts.
