

**Contents of**  
*Fundamentals of Riser Mechanics by Charles Sparks*

**Preface**

**Acknowledgements**

**Nomenclature**

**SI Unit equivalents**

**1 Introduction**

- Riser Types
- Book Content Overview
- Excel File *SCR-Example.xls*
- Summary
- References

**2 Pipe and Riser Deflections and Global Stability. The Effective Tension Concept.**

- Introduction
- Archimedes' Law
- Archimedes' Law. Proof by Superposition
- Internal Forces in a Submerged Body
- Curvature, Deflections and Stability of Pipes and Risers under Pressure
- Effective Tension – A Physical Interpretation / Definition
- Effective Tension – a Mathematical Approach
- Comparisons with Analogous Engineering Concepts
- Requirements of Codes of Practice
- Excel File *Effective-Tension.xls*
- Summary
- References

**3 Application of Effective Tension. Frequent Difficulties and Particular Cases.**

- Introduction
- End Loads and End Effects
- Buoyancy
- Recurrent Questions and Problems
- Multi-tube Risers - Components of Effective Tension and Apparent Weight
- Effective Tension and Riser Dynamics
- Principle Reasons for Confusion about Effective Tension
- Summary
- References

**4 Pipe and Riser Stresses**

- Introduction
- Stresses in Thick-Walled Elastic Pipes
- Effective Stress and Excess Stress
- The von Mises' Equivalent Stress
- Position of Codes of Practice with Respect to Stresses
- Two Particular Yield problems
- Numerical Example using Excel File *Riser-Stresses.xls*
- Summary
- References

**5 Pipe and Riser Strains**

- Introduction
- Axial Strains of Thick-Walled Elastic *Isotropic* Pipes
- Axial Strains of *Anisotropic* Pipes. Equivalent Poisson's Ratios.

*Anisotropic* Pipes. Determination of Equivalent Poisson's Ratios.  
Pressure-Induced Buckling of Pipes Fixed at Both Extremities  
Pipe Stretch Following Upending  
Riser Tension and Stretch Resulting from Internal Changes  
Influence of Tensioners  
Summary  
References

## **6 Tensioned Beam Behavior**

Introduction  
Excel File *Tensioned-Beam.xls*  
Influence of Bending Stiffness for Beam with Uniform Load  
Influence of Bending Stiffness for Beam with Parabolic Load  
Influence of End Moment  
End Rotational Stiffness  
End Shear Force  
Beam Angles Deduced from Cable Angles  
Summary  
References

## **7 Statics of Near Vertical Cables**

Introduction  
Uniform cable *with* current load  
Uniform cable with *zero* current load  
Segmented cable *with* current load  
Segmented cable with *zero* current load  
Simple Approximate Solutions for Near Vertical Cables  
Summary  
References

## **8 Near Vertical Riser Static Behavior**

Introduction  
Riser linear behavior  
Excel Files *Uniform-Riser.xls* and *Segmented-Riser.xls*  
Curvature and Profiles  
End Rotational Stiffness  
End Shear  
Riser Angles Deduced from Cable Angles  
Summary  
References

## **9 Stress Joint Design**

Introduction  
Stress Joint Forces and Design Requirements  
Stress Joint with Constant Curvature  
Stress Joint with Constant Maximum Bending Stress  
Wall thickness  
Stress Joint with Tapered Wall  
Simulation and Verification using Excel File *SJ-Design.xls*  
Numerical Example  
Summary

## **10 Riser Bundles. Local bending between guides.**

Introduction

General bundle behavior  
Distribution of Moments according to Load Type  
Numerical Application using Excel File *Bundle-Moments.xls*  
Decomposition and Recomposition of Moments  
Summary

## 11 Near Vertical Risers associated with Floating Platforms with Stiff Tensioners

Introduction  
TLP Riser Stretch and Setdown due to Platform Offset  
TLP Riser Tension and Sag due to Offset. A Simplified Calculation.  
Numerical Evaluation using Excel File *TLP-Risers.xls*  
Floating Platform Riser Tension and Sag due to Offset. A Simplified Calculation  
Numerical Example using Excel File *Floater-Risers.xls*  
Influence of Internal Changes on Riser Tension and Profile  
Particular application. Composite Riser with Steel Tubings.  
Summary

## 12 Steel Catenary Risers

Introduction  
Basic Differential Equation  
*Cable* Catenary Equations  
TDP Shift due to Top End Movement using Excel File *TDP-Shift.xls*  
Catenary and Flowline Stretch  
Global Influence of Bending Stiffness  
Details of Numerical Analyses  
Influence of Bending Stiffness on TDP position  
Top Tension, TDP Shear Force and Soil Reaction  
Summary  
References

## 13 Axial Vibration of Fixed Risers

Introduction  
The ODP Experience  
Axial Stress Waves  
Axial Displacement – Tension Relationships for a Uniform Riser  
Responses of a Uniform Riser using Excel File *Fixed-Axial-Vibrations.xls*  
Dynamic Stiffness of a Uniform Riser  
Axial Vibration of a Segmented Riser  
Summary  
References

## 14 Axial Vibration of Hung-Off Risers

Introduction  
Uniform Riser  
Uniform Riser with Concentrated Mass at Lower End  
Simulations using Excel File *Hungoff-Free-Vibrations.xls*  
Segmented Riser with Concentrated Mass at Lower End  
Riser comprising Multiple Repeated *Joints*  
Uniform Riser with *Distributed* Damping  
Uniform Riser with *Equivalent* Damping  
Simulations using Excel File *Hungoff-Damped-Vibrations.xls*  
Hung-off Riser Experience and Research Campaigns  
Summary

## References

### 15 Transverse Modal Vibrations of Near-Vertical Risers

Introduction

Physics of Undamped Transverse Vibrations

VIV *Modal* Vibrations

Basic Equations – Vibration of a Beam under Constant Tension

*Bessel Cable* Analysis of a Riser without Bending Stiffness ( $EI=0$ )

*Simple Cable* Analysis of a Riser without Bending Stiffness ( $EI=0$ )

*Simple Beam* Analysis of a Riser with Bending Stiffness ( $EI\neq 0$ )

*Approximate Beam* Analysis of a Riser with Bending Stiffness ( $EI\neq 0$ )

Validation using Excel File *Uniform-Transverse-Modal.xls*

Segmented Risers – Modal Responses

Validation using Excel File *Segmented-Transverse-Modal.xls*

Extension to Catenary Risers

Summary
