

## General Ledger in Navision Attain®

As your business grows and changes, you need a business solution that manages your financial information efficiently. Is your current solution up to the challenge?

**Benefits:**

General Ledger is the application area of Navision Attain that posts, processes and reports all financial information about your company. General Ledger allows you to:

- Optimize data management
- Generate complete audit trails
- Automate procedures to improve workflow

Use the FlowFilter® functionality in Navision Attain to drill down to detailed information quickly.

With its flexible work tools and online integration, Navision Attain offers an efficient way to centralize your company's accounting information. You can produce a wide range of trial balances and customized financial statements, consolidate subsidiaries with organizational roll-ups and reporting, and filter balances by criteria such as time period, department or project. Online integration ensures that:

- Figures are continually updated
- Individual entries can be traced throughout the system
- Users can enter and post data simultaneously

In Navision Attain, every posted General Ledger entry is assigned an entry number and a transaction number, making it easy to track throughout the application. Entry lists include information about balancing entries, VAT and dimensions. Entries are also assigned a source code, a reason code and a user ID so the source of an entry is always documented, providing you with a complete audit trail.

The customizable Navision Attain interface can be changed in minutes to match your workflow. Change the appearance of forms by adding additional fields or tables and creating user-specific menus. You can also automate many of your procedures, giving you a tailored business solution that actually improves your workflow.
