Multi-language in Navision Attain makes it easy for multilingual employees and international subsidiaries to work with the application in their native languages.

Communication is important in every business, but effective communication with international customers and vendors can be more difficult to accomplish. One common communication barrier is language. Navision Attain helps you break down this barrier with its multi-language capabilities. Navision Attain allows you to switch languages on-the-fly, helping you communicate more efficiently with customers and partners around the world. Switch between languages easily to send Mexican customers invoices in Spanish and Brazilian vendors purchase orders in Portuguese. Navision Attain supports 198 languages.

You will want to make sure that your overseas customer service is up to par, as well. One way to offer better service to all of your customers and partners abroad is by doing business in their currencies. For example, EMU-zone countries must adopt the euro as their primary currency during the first six months of 2002. Multi-currency in Navision Attain allows you to help your European customers and partners with the transition. Navision Attain also supports an unlimited number of other currencies, allowing you to take advantage of opportunities in other parts of the world as well. Navision Attain lets you define exchange rates, and it even lets you specify fixed item prices regardless of fluctuations in exchange rates.
