

How to measure your garage door opening for a *Fresh Air Screen*[®]

1. Measure the exact width of the garage door opening from door jamb to door jamb, not from the weather strips. (# 1 and # 2) Make no allowances.
2. Measure the exact height of the garage door opening from the door header, not the weather strip, to the floor. (# 3 and # 4) Make no allowances.
3. Give us the WIDTH (1st) x HEIGHT (2nd) for your measurement. For example, 16' (width) x 7' (height) (Make sure you do not mix these sizes up because the screen will not fit)
4. Please note: **WE ARE NOT RESPONSIBLE IF THE MEASUREMENTS ARE INCORRECT.**
