

Envirolet™ Operation Made Easy

Envirolet™ should be operated according to the directions provided for proper System performance. You can use your Envirolet™ Composting Toilet essentially the same as you would a “normal” flush toilet, with a few minor exceptions. It is important that certain directions required for proper System operation are followed.

DAILY

Use the Envirolet™ daily within the rated capacity. You can add toilet paper to the System, but please ensure that it is 1-ply, white (non-dyed) toilet paper only. Do not use 2-ply toilet paper. Also, try to educate users to use minimal amounts of toilet paper.

USER TIP: Toilet paper will biodegrade and become part of the compost material. But, if it appears to “build-up,” it can help to spray it with a small amount of warm water from a spray bottle.

Your Envirolet™ should be operated **daily** according to the following directions:

1. Add 1/4 cup of peat moss per person per day using the toilet through the Bowl (in Self-Contained Systems) or through the Service Panel (in Waterless or Low Water Remote Systems). Please refer to the following reference chart to see how much you should add.

USER TIP: Most Envirolet™ System owners will keep a small container of peat moss right in the bathroom near the Envirolet™. This makes it easy and helps you remember! Also, try spraying your peat moss very lightly with a spray bottle of water before adding it to the Envirolet™. This will help keep any dust from your peat moss to a minimum.

DAILY PEAT MOSS ADDITION CHART

| Amount of people using your Envirolet™ System daily | Amount of peat moss to add to Envirolet™ System (in cups) |
|---|---|
| 1 | 1/4 |
| 2 | 1/2 |
| 3 | 3/4 |
| 4 | 1 |
| 5 | 1 1/4 |
| 6 | 1 1/2 |
| 7 | 1 3/4 |
| 8 | 2 |
| 9 | 2 1/4 |
| 10 | 2 1/2 |

WEEKLY

1. Agitate and aerate the mass inside your Envirolet™ by pulling the **Aerator Bar** (top bar on the front of composting unit) back and forth a few times.

IMPORTANT: Generally, you will only use the **Rake Bar** (bottom bar on the front of the composting unit) when emptying your Envirolet™. Occasionally, you may wish to “rake down” material to allow for a longer emptying period. Contact SANCOR™ if you have any questions.

EVERY 2 WEEKS

1. Add SANCOR™ [Microbe Accelerator](#) (mixed with a warm glass of water) evenly over the mass in your System. Add the Microbes through the Bowl in Self-Contained Systems and through the Service Panel in Waterless or Low Water Remote Systems. This will help speed up the composting process. Add more often if desired.
