# **About the Company**

## **Overview and History**

Security Pro USA was established in Los Angeles, CA in 1986. The Company provides equipment for the Military, Law Enforcement, and civilians. We have been serving countries and government agencies around the world since our conception and have been growing ever since.

Security Pro USA distributes products for over 60 manufacturers worldwide. Our company is leading the industry with the highest developed body armor and survival equipment available. Our first-hand knowledge of this product line gives us the advantage over most other suppliers. The friendly Tech Support here can offer rapid responses for any of your questions about our unique and exclusive product line.

## **Why Security Pro USA?**

What makes Security Pro USA unique is its desire for equality. Whether you are a small business, large corporation or a single individual, every transaction is important to us. We cater to all of our customer's needs. There is no hassle when dealing with Security Pro USA.

Our company is in a strong market position to extend existing product lines and to offer its clients fully integrated product solutions. Our President and multi-lingual staff are educated on all of our products and can answer direct questions with confidence and accuracy. Security Pro USA is dedicated to giving our customers the information they need. Additionally, the company's top of the line products and highly competitive pricing distinguishes us very well in our industry.

## **Direct Sales of Homeland Security Products**

Security Pro USA continues to support the Military and Police Forces that were crucial in reducing the trauma of the September 11<sup>th</sup> terrorist attacks and, more recently, the relief of Hurricane Katrina and Hurricane Wilma. State and Federal Governments globally have been quick to choose Security Pro USA to supply their homeland security and safety needs.

## **More Specialty Items**

Security Pro USA offers an extensive range of specialty items such as bomb detection and E.O.D. equipment, including bomb disposal containers, EOD suits, detectors and disrupters, portable X-Ray kits, electronic stethoscopes, bomb suppression blankets, Bullet-Proof Vehicles, and other unique equipment.

Our company is also a main provider of essential equipment used by the international forensic and homeland security sectors. We provide metal detectors and chemical detection devices to many international organizations for the use of security screenings and suspicious package scanning.

Other products supplied include video surveillance, digital imaging systems, sound magnification devices, and other spying equipment and E.C.M. technology.

In addition, Security Pro USA offers general security products to private corporations, airports, public venues, and civilians.

References are available upon request.

Over 9 years ago HDE saw the need for competitively priced, yet reliable robotics systems for use in bomb disposal, SWAT, HAZMAT, and nuclear, biological, and chemical response. All of the robots available, both then and now, were priced beyond the reach of many departments across the country and the world. Yet those departments and their personnel will still need the technology to face the dangers of today and the future.

The need for effective technology to combat catastrophic terrorism continues to increase rapidly. As a result, there has been much progress made in the development of sophisticated hand-held sensing instruments that detect and analyze nuclear, biological, and chemical agents. However, the traditional method of delivering these sensors into a possibly contaminated area still involves using a technician in a biochem suit obtaining the sensor data in proximity to the danger.

## **MURV-100-S**

---

The MURV-100-S can contain SIMS for up to 4 sensors. The particular sensing instrument used on the robot can be quickly exchanged for another sensing instrument in the field without special

HDE offers a variety of accessory items developed to enhance the performance of our robotics products. Along with our standard accessories, HDE specializes in tailoring our products to the customer's precise requirements.

# Light Bomb Suit

---

Bomb DISPOSAL Suit is worn over the uniform providing maximum protection for all parts of the body. Comes with helmet and ballistic face shield.

This model is used in the IDF, as well as in other military forces, and serves in Special Bomb Demolition Squads, Civil Defense Personnel, and Police Sappers

The suit is designed in such a way allowing maximum comfort .

# Light Bomb Suit

---

Currently in service throughout the world with Bomb Disposal Teams, the SECURITY PRO EOD Bomb Disposal Suit is a state-of-the-art garment specifically designed to give the highest level of protection with the maximum comfort and flexibility to the user.

The EOD helmet is made from a sandwich construction system developed by and unique to the company and is fully adjustable by means of the three-point suspension.

Incorporated in the helmet is the facility for a communication set consisting of two headphones with one microphone and extension lead for attachment to any VHF radio transceiver.

Also incorporated in the helmet is an Air Ventilation system, which directs the flow of, forced fresh air over the top of the helmet liner, across the visor and down over the operator's face ensuring efficient demisting and clear view.

This system can be used in conjunction with a canister (NBC or chemical) configuration

# Bomb Blanket

Tested to MILSPEC and NATO Stanag 17-gram Fragment V50 620m/s. Our Bomb and Ballistic blankets will also offer protection against blast and fragments as follows:

Level 11A -V50 @ 450m/s Level II - V50 @ 550m/s Level III-A - V50 @ 620 m/s

Made with multiple layers of treated KEVLAR 129HT 1100 Dtex, ballistic fabric conforming to the protection level required and then sewn into a fire retardant, water repellent nylon cover.

Will contain explosions from a large variety of bombs. Sixteen sq. feet of coverage provides substantial protection; yet the blanket is light enough (22.5lb) to be carried by one man.

## Inflatable Mine Sandals

**INFLATABLE SANDALS FOR MINE-CLEARING SAPPERS** One of the most complex, delicate and dangerous tasks of the infantry on the modern battlefield is clearing mine-fields and leading troops through them. Mines – Principle of Operation - There are many different types of mines, which

differ from one another in their purpose (“anti-personnel”, “anti-vehicle”, “anti-armored vehicle”), but their manner of operation is identical in principle: The mine is an engineered structure containing a quantity of high explosive, which is buried in the ground. Mine operation is triggered by a fuse some part of which is inserted into the explosive while the rest projects above ground and to prevent discovery is usually camouflaged by dirt, loose stones, etc. Treading on the fuse triggers a chain of chemical or mechanical reactions which ultimately lead to the activation of the explosive contained in the mine.

Mine fuses differ in the minimum weight required to trigger them (in accordance with their different purpose), in the depth at which they are buried in the ground (and hence in the dimensions of the fuse) as well as in the fuse surface area. Use of sapper’s sandals Sappers’ sandals were developed in order to reduce the hazard of setting-off a mine.

# Protective Blast Boots

---

## Specifications:

Premium quality classic black leather combat boot, suitable for any terrain and environment

Available in black or desert colors

Height: 10-inch

Upper: Full grain leather, waterproof membrane lining  
Collar: Foam filled padded leather

Insole: Removable contoured polyurethane

Lacing System: Black oxide coated steel loop-holes & eyelets

Midsole/Outsole: Lightweight dual density rubber

Outsole Tread Pattern: Chevron

# Eighteen Zone Intelliscan

---

## Round Convex or Flat Mirror

Excellent for security when needed to look under or around vehicles, machines, equipment and hard-to-see areas. Available from lightweight hand-held to complete with caster wheels and light.

6 styles from which to choose Available in 12" Round Convex or Flat Acrylic Mirror. Equipped with adjustable swivel for infinite adjustment. Has a heavy-duty extruded rubber rim to help prevent damaging objects when maneuvering.

Level I—BXB  
Rampart Model

Level II—BXB  
Citadel Model

Level III—BXB  
Fortress Model

## About the BXB

The Department of the Treasury - Bureau of Alcohol, Tobacco and Firearms (ATF) is in charge of investigating explosive incidents. An ATF agent wrote about explosive containment trash receptacle product testing, "No performance standards exist, thus the ability of the potential customer to effectively evaluate one product design against another is perhaps problematic." The ATF agent was right. Manipulation of any combination of charge weight, density, shape, location or ignition position can alter and construe results.

**Evaluation is no longer problematic.** The BXB models are designed, tested and built to provide security directors, facility managers and owners with the actual force protection they need.

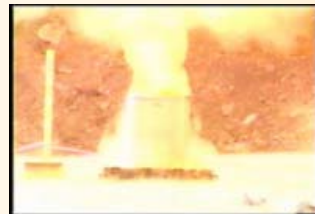

### Eruption Process ...

1

2

3

4

5

6

7

No fragmentation or  
horizontal rupture.  
Stainless top stays intact.

All models are 29.95" in diameter and 37.5" high

### WEATHERPROOF COVER

- Flexible Ultra Violet Resistant, Molded, One Piece Plastic
- Disengages in vertical direction
- Use Indoors or Outdoors to hide unsightly trash
- Trash collection is simple, just lift cover and remove bag
- BXB appearance is like an ordinary trash receptacle with weatherproof cover
- Standard colors with Sand Finish
- Available in BLACK, GRAY, BROWN, TAN, or GREEN

**Security Pro USA**

Global Supplier of Police and Military Products

# SecPro BXB Bomb Explosion Bins

- Triple wall patented technology
- Vertically directed internal blast
- Galvanized edges, walls, and drains
- Weatherproof cover is available
- Installation and Maintenance instructions included
- ADA compliant
- Designed and built in the USA
- Unique, patented design
- Sturdy galvanized exterior walls are covered with your choice of factory installed color laminates.
- Laminate exterior can be replaced by a local laminator if damaged or color schemes are revised.
- Attractive and durable 304 Polished Stainless Steel top is standard.
- The stainless top is designed to tip items into container to keep explosive inside.
- Easy on-site placement, leveling, and anchoring
- Ten minutes is all the time needed to install

## EVD-3000

### The world's first and most recognized portable explosives trace detector

The E3500® is the world's first and most recognized portable explosives trace detector that uses Luminal Chemiluminescence's (Chemilumina). It is the only portable device capable of detecting the presence of all the threat explosives including ICAO taggants, military plastics and TATP. It also does not use any external carrier gas or radioactive source (unlike others). It offers extremely fast and stable detection with very high selectivity for explosives.

## EX-DETECT XD2

There exists a worldwide diversity of needs for the detection of high explosives (HE) in emergency and non-emergency scenarios, environmental surveys, and where public concern is high. Explosives (which are chemicals) are prevalent, encompassing huge industrial and military applications, have also been the primary weapons of choice for terrorists and other clandestine activities.

## EST-4200

The Electronic Nose and Vapor Analysis Technology is based upon Surface Acoustic Wave (SAW) sensors and flash chromatography. For the very first time, the fragrance, odor, or smell associated with virtually any chemical process, manufacturing operation, or product can be chemically analyzed and quantified with part-per billion accuracy within seconds.

The EST-4200 Ultimate Vapor Tracer & Analyzer can be programmed to detect, "Sniff-out" even minimal amounts (picograms) of harmful residues, including gases and liquid substances inside packages, parcels, envelopes, containers, gas tanks and enclosed compartments of a vehicles

# ELECTRONIC JAMMING SYSTEMS

---

## 1. Prospective Purchasers:

The Tactical Electronics range of systems have been proven and provide effective operational protection to a security team / VIP personnel. These systems are reliable and user friendly with an emphasis on weight and size reduction without any reduction in performance. The development of these systems has been continuous over the last 20 years and they have an extremely good reputation.

We have been recognized as developing one of the most effective systems and supply to military, enforcement and private security teams worldwide. We have credible sales and client lists, and are US DoD CAGE registered.

In March 2005 we made a strategic alliance with US partners the EDO Corporation based in the Simi Valley California. We are currently developing a US manufacturing facility with EDO for our systems. Our systems are technically sound and perform to meet the most challenging of operational conditions.

## 2. The Systems:

### 2a. CENTURION

The Centurion system is a popular design, which can be fitted into a vehicle, carried as a portable unit or used as a stand-alone system. Clients should specify the system preference. The man portable unit has a small additional cost with the additional battery pack.

The broadband system comes in two options. 20-500Mhz or 20-1000Mhz.

CENTURION SPECIFICATION Frequency range 20-500Mhz 20-1000Mhz Power Output 100 watts pep 100 watts pep Signal Type FM Noise FM Noise Radiation Monopole type (option for log periodic) 1.65m Monopole type (option for log periodic) 1.25m Cooling Forced air system Forced air system Supply 12-20 vdc (24vdc optional) – 15 amps 12-20 vdc (24vdc optional) – 15 amps Environment -20 - +55 humidity to 90% rh -20 - +55 humidity to 90% rh Rugged Epoxy coated steel case 265x225x135 3

## 2b. WOLF

The Wolf system provides a total solution to meet the demand for a vehicle installed wide band jamming system. The unit encompasses the wide band barrage system favored by operators worldwide and also the latest in GSM / UTMS / SAT communications jamming. Add this to an internal rechargeable battery where the system can be operational without the need of vehicle power and you have a total solution for ECM protection.

### WOLF SPECIFICATION

Frequency coverage 20-500Mhz, (CDMA) 860-885 Mhz (GSM) 925-965 Mhz. (DCS/PCS) 1800-1950 Mhz, (UTMS/3G/SAT) 2100-2200 Mhz Power levels 20-500Mhz 100 watts pep CDMA 32 watts DCS/PCS 32 watts UTMS/3G/SAT 32 watts Power supply 13.2 volts nominal @ 25amps Internal Battery 24 volt 12AH NI/MH rechargeable Run time - internal batt 1 hr @20 deg C Temperature range -20 - +55 C Humidity 90% RH Case Zinc coated with epoxy powder coat Weight 18kg inc internal battery Size 340x280x210 Connectors Mil spec Cooling Forced air through custom heat exchange Air filter 50 microns Antennae connectors 50 Ohms (N Type) Signal type: Barrage GSM/UTMS FM modulated noise for barrage section Frequency hopping FM / noise

## 2c. SCIMITAR

Scimitar ECM MK8 Digital. This system has been updated to combat the latest threats and encompasses the very latest technology to achieve a small size and light in weight equipment. This unit is in use with most special ops groups throughout the world. Available in two versions, version (1) has the addition of a

large capacity NiMh internal rechargeable battery, this enables the unit to be used in a multi roll situation for force protection use as well as local EOD use, being able to run at full power on its own internal battery, the battery is kept charged whilst the unit is installed in a vehicle and should the need arise to use the unit as a fully portable unit then a fast mains charger is provided. Version (2) this version is for pure vehicle installation and as version (1) gives full cover of most threat frequencies discovered to date, this unit is for use as a VIP protection unit or as a Force protection unit for use in convoy situations, both units are equipped with digital and analogue signal systems, the unit effects both threats from the older technologies that are still a very real threat and also the latest digital GSM threats that are becoming more common.

## Explosive Detection Kit

We would like to introduce to you a new and innovative security product that we are currently promoting: ETK (Explosives Testing Kit) - A portable micro-laboratory for rapid detection of explosives.

Developed by the best chemistry scientists in the world, the ETK is a simple, very smart and cost effective system that can help us fight those who are trying to harm us by detecting the origins of the explosives and prevent future disasters from happening. ETK can detect ALL kind of explosives and was expended to detect the improvised explosive TATP.

This portable micro-laboratory, with its sensitive, simple, rapid, precise and reliable operation, revolutionizes the field task of police and other security agencies in the detection and identification of explosives.

## Statement of Liability Waiver

Security Pro USA will sell only to buyers who are U.S. friendly and can legally do business with the United States.

Foreign buyers agree to abide by local and international laws in regards to the use of Security Pro USA products.

Buyers agree to hold Security Pro USA harmless from any injuries caused by the misuse of the products.
