

Ergodex compatibility with Vista

There is a lot of interest in support for Vista on the DX1. Ergodex Manager, the DX1's application software, does not presently support Vista. The beta release of support for Vista in Ergodex Manager software is not ready at this time.

There are two choices:

1. Use third party software: Some independent third parties have put together a "driver" enabling the use of the DX1 on Vista. You can find further info on this project at:

<http://www.ergodex.com/forum/viewtopic.php?t=1649&postdays=0&postorder=asc&start=0>

Follow this thread completely for a full understanding of the effort underway here. This software may or may not work for you. Please note that this project is not an Ergodex supported activity, the software available through it is not supported by Ergodex, and Ergodex does not make any representations with regard to it.

2. Wait for a new release of Ergodex Manager: While much more is possible with Ergodex technology than is presently available with the DX1, Ergodex does not comment on or commit to future product plans or features, including additional operating system support. When new products, new features, or new releases are available, they are announced by email (to customers), in the New Product Announcements Forum, and in other venues.
