

# Fertile-Focus®

personal ovulation microscope

Predict Ovulation Easily and Accurately

## Pinpoint Your Optimal Time to Conceive!

Fertile-Focus® Ovulation Microscope is a saliva-based ovulation predictor designed to assist a woman in identifying her most fertile days of the month. Fertile-Focus® is a 100% safe and natural aid to conception. Backed by clinical research, Fertile-Focus® pinpoints ovulation with 98% accuracy and is effortless to use. With an attractive, resilient metal casing, a glass lens supplying lab-quality and detailed product instructions, Fertile-Focus® offers an effective and affordable way to increase your chances of conception.

## How it Works

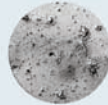

When a woman is about to ovulate, her saliva begins to form a distinct crystal, fern-like pattern due to an increase in hormone levels – as seen through Fertile-Focus®. This “ferning” pattern begins to appear around 3 to 5 days prior to ovulation, allowing you to predict peak fertility.

“When it comes to trying to conceive a baby, accurately predicting ovulation - your most fertile time of month - is the key to success. Fertile-Focus® is the first affordable, high-quality saliva ovulation microscope that allows you to predict ovulation easily and accurately.”

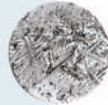

- Dr. Amos Grunebaum, ObGyn and leading fertility expert
