

Dear Property Manger, Energy Auditor and Builder Clients

SAVING WATER & MONEY, AT THE TOUCH OF A BUTTON

Furthering our mission to promote water efficient products, we are happy to announce that we have joined with Caroma, the world leader in “Dual Flush” technology to distribute the complete line of Caroma bathroom products.

For those of you not familiar with “Dual Flush”, a dual flush toilet has **two buttons for flushing**, a half flush and a full flush. The half flush, for liquid, uses 0.8 gallons per flush. The full flush, for solids, uses 1.28-1.6 gallons per flush (gpf), depending on the model. Using the 1.6/0.8 dual flush toilet can **reduce water usage by up to 75%**, depending on which traditional toilets are currently in use (traditional toilets are 2.9 gpf or 3.5 gpf).

Dual Flush technology essentially achieves the same results, with substantially less water. No compromises. With the Caroma toilets you also gain the benefits of a [washdown toilet system](#) which together with a massive 4 inch trapway, virtually eliminates the possibility of clogging.

The [WaterSense label](#) insures that toilets meet the high requirements criteria set by the EPA. WaterSense labeled high efficiency toilets (HETs) combine high efficiency with high performance. Caroma currently boasts 45 WaterSense labeled high efficiency toilets, a testament to its quality and technology. No wonder Caroma has won several prestigious awards including the Popular Mechanics Breakthrough Award in 2008.

Please visit our website under the [Water Savers – Bathroom](#) Savers category, for a more in-depth look at the benefits of Dual Flush and the Caroma product range. We stand ready to provide you **with attractive pricing for your volume purchases**. Feel free to call us at 888-405-6064 with any questions you may have.
