 **Wire-Free**
The WiFi Fence.™

Just about the only thing Wire-Free has in common with lesser wireless systems is no buried wire hassles.

You're about to discover the technological superiority of Wire-Free. It's not just the evolution of the dog fence - it's a quantum leap.

It's about time wireless went WiFi

It's not a fair comparison, really. How could anyone expect a product introduced thirteen years ago to rival that of the latest wireless network communication technology? The fact is that technology evolves. You probably don't rent VHS movies, or use a TRS80 computer complete with floppy disks. And we think using old wireless fence technology to keep pets safe doesn't make much sense either. But, just so you don't confuse Wire-Free: The WiFi Dog Fence™ with just any wireless system, here is a quick look at some of the differences.

Wire-Free™ – The first and only WiFi Fence for dogs.

Wire-Free utilizes the latest fully integrated transceivers used in advanced asset tracking applications and the latest wireless communication devices. Dog lovers can now have an intelligent dog fence that not only provides freedom from the hassles of buried wires, but an indoor SmartStation™ that controls your dog's boundary and communicates important system and safety information back to you.

While enjoying their outdoor freedom, the pet's collar is wirelessly connected and communicating information hundreds of times per second back to the indoor SmartStation, where a concerned pet parent can view critical safety information such as the distance from the boundary area, whether Fido might be attempting a jail break, or be instantly notified if Rover is left unprotected by the system for any reason and free to roam.

View your pet's collar battery status without ever touching their collar.

Superior 2.4 GHz WiFi signal provides three times the coverage area of other wireless systems.

Know the system is working by viewing your pet's range from the SmartStation™ in real time!

120 feet

Wire-Free will warn you when your dog is attempting to challenge the system boundary.

FENCE CHALLENGE!

You'll be immediately notified if your pet is unprotected for any reason.

NO SIGNAL

Set and view your pet's collar stimulation level.

Level 3

LATEST WIRELESS TECHNOLOGY
802.15

Select from five different stimulation levels. The perfect touch for every dog, from shy to the most committed escape artist. An absolute must for two dog households.

Exclusive wireless SmartStation™ is 1/10th the size of other wireless system indoor units and can be conveniently located just about anywhere.
