- *leg material:
- *load capacity: 5 lbs.
- *number of leg sections:
- *type of center column:
- *type of feet: cork-lined clamp
- *weight: 1.19 lbs.

[OSN CP10 Window Mount Clamp Review](#)

Outdoor, nature, and adventure photographers will all appreciate a helpful device that will steadily hold their camera while they remain comfortably seated inside their vehicle. A clamp, such as the OSN CP 10 Window Mount Clamp, will readily handle this type of photographic situation when a conventional three-legged tripod is useless. It's basically a conventional three-way tripod pan head that's mounted onto a cork lined "C" clamp that securely attaches to thin surfaces up to 1/2 inches thick. It has a die-cast metal base with a permanently attached pan head. The tilt top has a quick release plate. A long, easy-to-grip handle provides front to back tilting while a lockable hinge offers 90 degrees of side tilting. A large lockable knob on the left gives 360 degrees horizontal rotation. The device smoothly and efficiently holds most any size SLR camera body even with a moderately long telephoto lens firmly onto a car window. From years of experience with this type of camera mount, our only advice is to be sure you don't have children, or anybody for that matter, moving about inside the car while making time exposures as the entire car might jiggle and defeat the purpose of a steadying mount.
