

HeadShop OneClick – An Industry First!

Moss Beach, California October 25, 2016

What is OneClick?

It is a DAZ Studio plugin that works inside DAZ Studio (version 4.8 and up). OneClick allows you to turn a simple photo **automatically** into a Genesis 2 or 3 head in DAZ Studio, complete with texture mapping and shape morphing. OneClick is the only application in the industry that does this fully automatically.

The revolutionary feature recognition code inside OneClick automatically finds 86 points on a human face and translates these points into a realistic 3D head. We call the product OneClick, as it literally requires only one click to perform the transformation.

For those who want even greater realism, OneClick also allows the import of a profile photo. Tracing the profile makes the 3D even more realistic.

HeadShop OneClick for DAZ Studio is available for \$39.95 at www.abalonellc.com
