

Tribal Ink Airbrush Tattoo Paints

Dilution Instructions

- Start by shaking the bottle of airbrush tattoo paint vigorously.
- Pour about 1/4oz of the paint into any 1oz airbrush spray bottle.
- Add 1/4oz of high grade rubbing alcohol (90% solution), using a lower solution can dilute the paints with water and resulting in the paints being unusable.
- Put Cap back on bottle, if bottle top has any holes, place your finger over the hole and shake vigorously.
