FRESHhanger Review

I received a set of 5 [FRESHhangers](#). I removed them from the package and felt how soft they were. I sniffed them but there was no smell, at all. I think I expected the Cedar smell that I am used to with closet deodorizers. They are blue and have the FRESHhanger logo, website address and phone number on the front. The front piece is thinner than the back one that has the charcoal infused material embedded.

I decided to hang some of my clothes and some of my son's clothes on the [FRESHhanger](#). I chose my workout clothing and my son's work clothes. Our clothing had normal perspiration odor and whatever unrecognizable odors our clothing had picked up. I usually wash my workout clothing each time I wear them and my son has his work clothes dry cleaned, since he works in an office. The FRESHhanger fit easily over my existing hangers. I put all of the clothing on these hangers into my front closet.

It was a couple of days before I noticed that our clothing did smell fresher than they did when I first put them in the closet!! I asked my son to smell his clothing that I had put in the closet and tell me if they smelled the same or better. He told me that they smelled better! He kept sniffing them. The thought of saving money on dry cleaning made him happy! I also told him that it is safe and does not have the chemicals that are used in dry cleaning. When he picks his clothes up from the cleaners, most of the time he has to hang them outside before he wears them because they have an odor. I do not use dry cleaning so the advantage for me is getting an extra day of not washing my clothing.

Did I think these hangers would work or was I skeptical when I removed them from their packaging?

Yes I did think they would work because I know that Activated carbon has been proven to absorb and get rid of odor. Air and drinking water purification are charcoal-based odor absorbers. My air purifier works with Activated carbon and when I run it, I detect no odors in my home. Activated carbon works especially well on mold and mildew odors, I know this because I used it to successfully remove these odors from my downstairs rooms. Activated carbon is also used to absorb the scent of a human being on hunter's clothing, prior to hunting.

I feel that [FRESHhangers](#) are a money-saving, safe chemical free eco-friendly choice for consumers. [FRESHhanger](#) covers can be purchased for on their website [here](#) for \$12.99/5 pack, \$22.99/10 pack and \$39.99/20 pack.
