

Product Handbook

Pinnacle was born of a desire to create a line of premium auto care products for the enthusiast, a person who strives for perfection in every detail. For Pinnacle to be the best, it had to meet the standards of this connoisseur of car care, and even exceed those standards. The shine of our carnauba wax had to be the deepest, the glow produced by our leather cleaner had to be the warmest...Every product had to yield uncommon results in order to carry the Pinnacle name.

Beyond visual perfection, we made it our mission to formulate products that would combine the best of nature with the latest scientific technology. These products would actually nourish the vehicle's surfaces to render a deeper, richer appearance than any topical product could achieve.

Pinnacle began with one key ingredient, carnauba wax. For years, auto enthusiasts have recognized this natural substance as the basis for the warm, wet-looking shine that has become the standard in auto care. Carnauba is the hardest, purest, and most transparent wax nature has to offer.

It is harvested from the "Tree of Life", a tall palm that grows in northeastern Brazil. The tree produces the wax through its leaves to protect them from the harsh climate. The leaves are harvested every year and the wax is mechanically removed from them. The wax is then graded according to the age of the leaves and the level of processing. We choose only No.1 Yellow, the finest carnauba available, for our Pinnacle waxes.

Once we had the key ingredient, our chemist went one step further by refining the carnauba a second time to remove any remaining impurities. The result was the ultra-pure ivory carnauba found in every container of Pinnacle wax.

After finalizing the formula for our carnauba wax, we addressed other areas of the vehicle with the same passion that led us to create Pinnacle in the first place. The result of all this research is the Pinnacle Natural Brilliance line of superior car care products. Each and every product is formulated with science and nature in harmony so you achieve the highest level of surface enhancement and protection possible.

As auto care and the auto enthusiast have continued to evolve, so has Pinnacle. In 2005, we developed Pinnacle Xtreme Machine Technology Series, a collection of car care products built around machine-applied swirl removers.

Each Xtreme Machine Technology Series polish is formulated to take full advantage of machine application. Unique emollients, engineered lubricants, and Concentrated Micro Abrasives are just a few of the ways XMT Series is setting a new standard for machine-applied products.

In addition to swirl removers, XMT Series includes waxes, our one-step cleaner wax, shampoo, clay and lubricant - an entire line of exterior car care products for the enthusiast. Each XMT product is developed with the same commitment to quality as the original Pinnacle line.

That commitment to car care excellence continues today as we constantly research new ingredients and combinations in order to deliver the absolute best in surface enhancement. Pinnacle has exceeded the expectations of the most discriminating enthusiasts and taken its rightful place among the top auto care products in the world.

## Bodywork Shampoo

*Achieve a silky smooth, flawless finish with this luxurious wash!*

We use only the finest natural ingredients combined with the latest science in every Pinnacle product. In our Bodywork Shampoo, we went beyond traditional soap by adding coconut oils and a remarkable foaming technology to create a rich, gentle bath for your vehicle.

Coconut oils act as a lubricant to prevent scratches and swirls. The oils wrap around sand and dirt particles so they slide off your vehicle in the rinse water without leaving swirls behind. Even on dark colored vehicles, Bodywork Shampoo will leave a silky smooth, flawless finish. Best of all, the coconut oils give the shampoo a natural fragrance that rivals even the most luxurious body wash.

But even that wasn't good enough! At Pinnacle, we're always trying to improve upon our products with the latest technology so you'll always get the absolute best for your vehicle. With that in mind, we updated our original Bodywork Shampoo formula to include TUFF SUDS II®. Funny name, but serious cleaning power! This new foaming technology uses cleaners suspended in the suds' walls to scour away tough road grime. As the cleaner lifts grime from the paint surface, the suds engulf abrasive particles in natural coconut oils so they cannot scratch the paint. The mounds of foam ensure you'll have more than enough to safely to clean your entire vehicle.

To further protect your paint, Bodywork Shampoo yields a perfect pH rating of 7. The neutral formula will not remove or degrade protective waxes or sealants, extending the life of your existing paint protection.

To use Bodywork Shampoo, simply wash your vehicle as you normally would. Be sure to rinse vehicle before beginning the hand wash. We do recommend using a natural sea sponge, a Pinnacle wash mitt, or a sheepskin mitt. These will allow dirt to accumulate inside the fibers rather than sitting on the paint. Always towel dry your vehicle with a clean microfiber or a chamois to prevent water spots.

## Ultra Poly Clay

*Create a smooth-as-glass finish on paintwork, glass, metal and fiberglass!*

Pinnacle's Ultra Poly Clay is the single finest clay composition available today. With this ultra fine clay, you can maintain a totally clean, sleek finish everyday. We're calling it "enthusiast grade" for perfectionists who want that just-clayed finish all the time!

Ultra Poly Clay is a patented clay formula made exclusively for Pinnacle Natural Brilliance. Its texture and elasticity are unlike any other clay you've used. Years of research went into making a fine grade clay specifically for those who meticulously maintain their vehicles.

Pinnacle Ultra Poly Clay stands apart from the rest because it will not remove wax from a well-maintained vehicle. Regular use of the clay will keep paint contamination from making a lasting impression on your finely detailed finish.

Pinnacle Ultra Poly Clay is designed for frequent use. Whereas a medium grade clay is recommended to use once or twice a year, this ultra fine grade of elastic detailing clay can be used as often as necessary to maintain a slick, reflective finish. Use it as often as monthly - Pinnacle Ultra Poly Clay will not remove existing paint protection!

Although Pinnacle Ultra Poly Clay is a very fine grade of clay, it is effective at removing contamination build-up (6 -12 months without claying). Ultra Poly Clay cleans as well as denser grades of clay. The difference lies in the Ultra Poly Clay's ability to glide above the wax coat without disturbing it.

Plus, Pinnacle Ultra Poly Clay has superior elasticity as compared to heavier grades of clay. The clay can be reshaped and stretched repeatedly without losing its flexibility. Properly stored in its plastic case, Pinnacle Ultra Poly Clay will retain its elastic nature and workability.

Experience the Pinnacle of detailing clay technology. Use Pinnacle Ultra Poly Clay as often as necessary to maintain a silky smooth finish on your vehicle.

## Clay Lubricant

*Part cleaner, part lubricant for a clean, smooth surface.*

Clay bars easily create a perfectly smooth, glass-like finish, but they need a quality lubricant to work properly. Soapy water does not provide the same level of paint protection as a lubricant and some detergents may break down the clay. To get the most out of your clay bar, use Pinnacle Clay Lubricant.

Pinnacle Clay Lubricant provides a super-slick surface for your clay bar to glide over as it pulls contaminants out of your paint. It also provides a thin barrier between loosened contaminants and your paint to prevent scratches and swirls. Without lubricant, the clay would skip across the surface and anything it pulled out would drag across the paint. Clay Lubricant's high lubricity formula makes claying perfectly safe for all clear coat and single stage paint finishes.

When you've finished claying an area, you may notice some residue left by the clay bar. Simply wiping the area will remove it because Clay Lubricant also acts as a cleaner. Mist the area again for stubborn residues and they will wipe off easily.

Pinnacle Clay Lubricant works with any type of clay, synthetic or natural. It will not degrade the clay or harden it, even with repeated uses.

To clay your vehicle, mist a small section of paint with Clay lubricant. Rub the clay bar lightly across the wet area. It will grab at first; this is the clay pulling contaminants out of the clear coat. Keep rubbing until the bar glides smoothly. Wipe off any residues with a clean microfiber towel. Once you have clayed the vehicle, apply a coat of wax. The paint will have a slicker feel and deeper shine thanks to the clean surface left by Pinnacle Ultra Poly Clay and Clay Lubricant.

## Paintwork Cleansing Lotion

*Buff away minor imperfections to keep paint looking fresh.*

If your vehicle is not brand new, it probably has light swirls and fine scratches etched into the paint. These occur from automatic car washes, dirty drying towels, and poor quality products. However, minor damage is reversible. Pinnacle Paintwork Cleansing Lotion is a mild polish that will disguise those minor imperfections so your paint looks fresh and clean.

Paintwork Cleansing Lotion works similar to a facial cleanser. It gently exfoliates the paint to remove blemishes and stubborn contaminants, resulting in a brighter, cleaner finish than washing alone can achieve. **Cleansing Lotion works without the use of abrasives so it will not cause new swirls.** This is an important step in the detailing process if your vehicle is more than a year or two old, or has never had a wax coat. The refractive nature of wax will reflect any flaws in the paint. Paintwork Cleansing Lotion evens out the surface so the shine is uniform and flawless once wax is applied.

Paintwork Cleansing Lotion will not degrade paint or clear coat finishes. The formula makes swirls less noticeable by rounding the edges and filling in the swirls so light does not catch them. Once wax has been applied, most swirls will virtually disappear. The surface will appear perfectly smooth.

Apply Paintwork Cleansing Lotion by hand using a microfiber applicator pad. Pour a nickel-size amount onto the pad and rub over a cool surface. This amount should be enough to cover half of the hood or a whole fender. Hard rubbing is not necessary. Allow a slight haze to form and buff it off with a clean microfiber or terry cloth towel. For machine application, use a variable speed dual action polisher.

## Advanced Swirl Remover

*The swirl remover for perfectionists has been updated with the latest paint-perfecting polish technology!*

The rule of thumb when polishing is to use the least aggressive product that works. Pinnacle Advanced Swirl Remover embodies this rule with an ultra-gentle diminishing abrasive polish that preserves paint while restoring it.

Pinnacle's diminishing abrasives are tempered to break down slowly and evenly under the motion of the oscillating pad. A dual action polisher provides just the right motion and friction to maximize the performance and working time of these abrasives. This approach softens the abrasives' impact on the paint, which ultimately preserves more of the paint. If you have a newer vehicle or meticulously maintained paint, Pinnacle Advanced Swirl Remover is for you.

Pinnacle Advanced Swirl Remover is ideal for dark paints, custom paint finishes, delicate clear coats, and vehicles less than two years old. This is the swirl remover for perfectionists. A blend of diminishing abrasives and water-based lubricants removes swirls, water spots, mild oxidation, light etching, and fine scratches to leave paint absolutely flawless.

Pinnacle Advanced Swirl Remover is a DA-friendly swirl remover. It is designed with the speed and polishing capability of a dual action polisher in mind.

Pinnacle Advanced Swirl Remover is a real swirl solution! It contains no fillers or waxes. You can see the real results of your work. Because the abrasives break down gradually as you work, Pinnacle Advanced Swirl Remover does not create new swirls or micro-marring. It's the error-proof polish.

Follow with Pinnacle Advanced Finishing Polish to truly maximize the shine. This ultra fine polish burnishes the paint to a bright gloss in preparation for wax.

For the best results, apply with a dual action polisher. Pour a nickel size amount of polish onto a polishing or light cutting foam pad. Work the polish over a 2 x 2 sq. ft. section at a medium speed. When the polish is thoroughly broken down, buff away the residue with a soft microfiber towel. For complete directions and tips, visit [Pinnaclewax.com](http://Pinnaclewax.com).

## Advanced Finishing Polish

*Get smooth, shiny, irresistible paint with Pinnacle.*

Pinnacle Advanced Finishing Polish gives your vehicle's paint maximum impact with a clear, reflective gloss and flawless appearance. This is more than a finishing polish; it's the final word on shiny, smooth paint.

Pinnacle Advanced Finishing Polish is packed with diminishing abrasives that maximize surface gloss and reflectivity on all paint finishes. Our unique abrasives break down gradually as they abrade the finish, blending away any haze and restoring perfect clarity to the paint.

Think of the dust used by jewelers to polish fine gemstones. Jewelers polish cut diamonds by rubbing each edge against an iron wheel charged with diamond dust. As the dust polishes the diamond, oil is added to keep both surfaces lubricated. **To get the finest shine, you have to use the finest abrasives.** Pinnacle Advanced Finishing Polish uses this same principle to polish automotive paint.

Pinnacle Advanced Finishing Polish is a combination of diminishing abrasives and lubricants that buffer the abrasive action. The lubricants nourish and enrich the paint, while allowing the abrasives to move over the paint fluidly. Minor imperfections and cloudiness will disappear, revealing a crisp, clear gloss. Pinnacle Advanced Finishing Polish contains no fillers or wax, so you can see the real results of your work.

For the best results, apply Pinnacle Advanced Finishing Polish with a dual action polisher. Just like the jeweler's polishing wheel, the polisher is the platform for the polish. There is no need to apply pressure. The motion of the dual action polisher will do the work for you. The polish is easy to wipe off with a soft Cobra Microfiber Towel.

Pinnacle Advanced Finishing Polish is completely safe for clear coat paint finishes. With improved diminishing abrasives, lubricants, Pinnacle Advanced Finishing Polish sets the standard for finishing polishes. The results will speak for themselves!

Apply a thin coat of Pinnacle Advanced Finishing Polish onto a 2 x 2 sq. ft. section of paint using a foam applicator. Once the polish begins to dry, buff it to a high gloss using a microfiber towel. To apply by machine, apply a nickel-size amount of polish onto a foam polishing pad. Spread the polish over a 2 x 2 sq. ft. area at a medium speed. When the polish is thoroughly broken down, buff away the residue using a microfiber towel.

## Souverän Liquid Spray Wax

*A true, stand alone spray wax with the most real carnauba wax protection available in a liquid.*

Pinnacle Souverän Liquid Spray Wax contains the most carnauba wax available in liquid form, fortified with Pinnacle's own unique polymers. This combination yields a light-catching surface gloss plus a reflective depth comparable to a premium carnauba paste wax. Natural oils nourish the paint to enhance its jetting factor and increase slickness. This proprietary combination of the finest quality ingredients is the core of all Pinnacle waxes.

Pinnacle Souverän Liquid Spray Wax is a rich blend of No. 1 yellow Brazilian carnauba wax, liquefied crystalline polymers, and natural oils that offer Pinnacle's trademark sizzling shine plus excellent paint protection unheard of from a spray wax. **This is the only spray wax that contains enough real carnauba and polymers to stand on its own against tough environmental contaminants and UV radiation.**

The concentration of carnauba wax and polymers gives Souverän Liquid Spray Wax more paint-protecting ability than a conventional spray wax. Used over an existing wax or by itself, Souverän Liquid Spray Wax shields the paint from harsh UV rays, water, and airborne pollution. As a wax maintenance spray, it prolongs the protection and shine of the base coat of wax for weeks longer.

Pinnacle Souverän Liquid Spray Wax works on any color paint. Pinnacle Souverän Liquid Spray Wax is compatible with any carnauba paste wax or as a topper over a paint sealant. Just like all Pinnacle waxes, Souverän Liquid Spray Wax is streak and haze resistant even in climates of high heat and humidity. Buff your vehicle to a crystal clear, dynamic shine.

Mist the paint with Pinnacle Souverän Liquid Spray Wax and use a Cobra microfiber towel to spread the wax over a panel. Flip the towel and buff the paint to a high gloss. Use Souverän Liquid Spray Wax after every wash to add another layer of carnauba shine and protection to your vehicle.

## Liquid Souverän Wax

*The shine of a paste wax and the ease of a liquid.*

In the past, you had to use a paste wax to achieve the most attractive and durable finish possible. No liquid wax came close. We set out to change that with Pinnacle Liquid Souverän Wax.

Keep in mind that our Souverän Paste Wax is the very top of the pyramid when it comes to carnauba waxes, so naming our liquid wax Liquid Souverän really carries some weight. This is by far the finest liquid wax you will ever use. **The three dimensional, wet finish that is the signature of Souverän can now be achieved in liquid form.**

Special polymers allow Liquid Souverän to bond to your paint as well as any paste wax, and the shine is nothing short of spectacular. Never before has a liquid wax adequately captured the multifaceted shimmer of a carnauba like Liquid Souverän. Not only is it packed with carnauba, natural oils in the formula infuse the paint with moisture so that it appears wet. The polymers ensure long-lasting durability, comparable to that of a paint sealant.

Liquid Souverän was formulated in South Florida and is ideal for hot, humid climates. Application is effortless and it buffs to a streak-free shine every time. Liquid Souverän looks equally beautiful on any color vehicle. Metallics will shimmer and dark colors will have an amazing depth and richness.

Use Liquid Souverän very sparingly. A nickel-size amount on a foam applicator is all it takes to wax an average car panel. You can apply wax to one section at a time, or to the entire vehicle. For even easier application, mist your applicator with Pinnacle Crystal Mist. Once Liquid Souverän has dried to a slight haze, buff it away using a soft, microfiber towel. You may also apply this wax using a random orbital polisher with a foam finishing pad.

## Signature Series II Wax

*A rich, deep shine from nature's finest ingredients!*

Pinnacle Signature Series II Carnauba Paste Wax creates a warm, wet-looking shine with nature's finest wax and fruit oils. The results are sizzling shine, depth, and reflection that enhance any type and color of paint. Signature Series II is the most impressive wax in its class. In fact, many higher priced waxes can't compare to the shine of Signature Series II.

The "jetting factor" of this latest formulation of Signature Series II wax has been improved with the addition of a new liquid crystal polymer. For our purposes, the polymer is left in a semi-liquid state that both softens the carnauba and enhances the wax's reflective nature. The result is a **wetter, glossier finish** that brings out the best in any color paint finish.

Just like Souverän, the prime ingredient in Pinnacle Signature Series II is Brazilian Ivory Carnauba. Carnauba wax is world-renowned for its crystal clarity, its protective properties and its uncanny shimmer. Once our chemist purifies the wax again, it is blended with Pinnacle's proprietary ingredients to make Pinnacle Signature Series II.

In addition to carnauba, Signature Series II contains a complex blend of polymers and oils that wet the paint to give it head-turning gloss and reflection!

**Pinnacle Signature Series II has a buttery texture and inviting aroma that make it a pleasure to apply.** It goes on effortlessly and buffs to a crystal clear shine. The wax will not dry to a white chalk and will not stain trim or molding. Apply it any time of day, even in hot, humid conditions. Signature Series II will not streak or cloud. Signature Series II contains no cleaners and can be layered multiple times to increase depth and brilliance.

We invite you to try Pinnacle Signature Series II on your own vehicle. On any paint color, the wax is glossier, wetter, and deeper. In fact, it has earned the same silk bag as Souverän, Pinnacle's ultimate wax.

*Apply Signature Series II to a cool, dry vehicle using the included polyfoam applicator. Wax one panel at a time. It is not necessary to allow the wax to dry. Buff to a high gloss using a microfiber towel. Turn towel often. One 8 oz. jar of Signature Series II yields approximately 30 applications.*

## Souverän Paste Wax

*The wax for perfectionists!*

Pinnacle Souverän Carnauba Paste Wax is the cornerstone of the Pinnacle Natural Brilliance collection and the standard of carnauba paste car waxes. Its 3 dimensional shimmer and warm, sensual glow distinguish Souverän as the best American car wax and one of the few elite car waxes in the world. Countless concours events have been won by cars bearing Souverän's signature shine. For this reason, Pinnacle Souverän is known as "the wax for perfectionists!"

The primary ingredient in Pinnacle Souverän is Brazilian Ivory Carnauba, world-renowned for its crystal clarity, its protective properties and its uncanny warmth. No other natural wax is as sought after as No. 1 yellow carnauba wax, deemed the purest and highest quality by Brazil's government inspectors. **No. 1 Brazilian yellow carnauba is the only wax found in Pinnacle Souverän.**

Pinnacle purchased the highest grade yellow carnauba available and refined it once more to make an ivory-colored wax of unbelievable clarity and purity. Pinnacle's ivory carnauba retains the wax's natural protective characteristics but allows for a perfectly clear, rich finish when applied to automotive paint.

Natural oils have been added to the carnauba in order to "wet" the paint. This combination of ingredients is what gives Souverän its distinctive, wet-looking, 3D shine. Particularly on dark-colored vehicles, this wax creates a deep, fluid finish that comes to life under changing light. Reds glow with intensity. Blacks appear infinitely deep.

**Pinnacle Souverän Paste Wax wipes on easily in all climates and resists hazing and streaking.** The buttery wax does not dry to a white chalk and will not stain trim and moldings. Souverän is a true wax and has no cleaning properties. Each jar of Souverän is hand-poured to ensure quality and consistency.

*Apply Souverän to a cool, dry vehicle using the included polyfoam applicator. Wax one panel at a time. It is not necessary to allow the wax to dry. Buff to a high gloss using a microfiber towel. Turn the towel often. One 8 oz. jar of Souverän yields approximately 30 applications.*

## Crystal Mist Detail Spray

*Renew that just-waxed, crystalline shine!*

Pinnacle Crystal Mist Carnauba Detail Spray has been reformulated with restructured gloss-enhancing crystalline polymers, nourishing oils, and real Brazilian carnauba wax to provide your vehicle with an instant burst of shine and slickness. **This is the next generation of Crystal Mist Carnauba Detail Spray.**

The oils in Crystal Mist do more than lubricate dirt; they also enrich automotive paint. Crystal Mist is packed with compatible oils that improve paint's texture and appearance for an overall healthier, newer looking paint finish.

Carnauba, combined with crystalline polymers, creates sharp reflections and silky paint. **This state-of-the-art carnauba polymer matrix also enables Crystal Mist to bond to the existing wax for an instant but long-lasting gloss.** Particularly on top of Souverän Paste Wax, Crystal Mist reactivates the existing wax so you're not just seeing a surface gloss - you're seeing the depth and dimension of multiple layers of carnauba.

Crystal Mist has oxygen-activated polymers that bond to the paint as they are exposed to air. Ten minutes after applying Crystal Mist, the paint feels even slicker and looks wetter because the polymers have reacted with oxygen. If you are applying Crystal Mist on top of Souverän, you'll see exceptional results after the polymers react and bond to the existing carnauba wax.

Pinnacle Crystal Mist is compatible with all waxes and synthetic sealants. The natural oils and carnauba allow Crystal Mist to perform well in hot, humid climates.

To apply Crystal Mist Detail Spray, mist a panel generously. Use a folded microfiber towel to spread the products evenly over the paint. Flip the towel and buff the panel to a reflective shine.

## Gel Wheel Cleaner

*Attack baked-on grime with this aggressive chemical cleaner.*

Wheels don't just get dirty, they get filthy! Being so close to the ground, they accumulate tar, dirt, grease, exhaust residue, and, to top it all off, brake dust. If not properly cleaned, these contaminants will eat away at the wheels' finish, causing them to lose their metallic luster. Pinnacle Gel Wheel Cleaner can change all that.

Wheel cleaners that are made to work instantly often have an obvious flaw - they run. They can't possibly dissolve the grime if they are running onto the ground. That's your money pooling under your tire. Pinnacle Gel Wheel Cleaner is completely different. **The gel formula clings to your wheels so it has time to dissolve all the baked-on filth.** No running and no waste.

Pinnacle Gel Wheel Cleaner is a new breed of cleaner. Rather than relying on petroleum distillates and butyl or butyl ethers to eat away grime, Pinnacle utilizes modern cleaning agents and emulsifiers to dissolve the grime without attacking the wheels' finish. Our wheel gel is water-based and nontoxic, so it's safe for you and your vehicle. If overspray should occur, the nonacidic gel will not hurt your paint. Use Pinnacle Wheel Cleaner on all types of wheels with confidence as often as needed. **This cleaner will never dull the finish on any aluminum, painted, polished, anodized, clear-coated, or billet wheels.**

Pinnacle Gel Wheel Cleaner also lifts dirt and grease out of rubber. You're getting an effective tire cleaner and wheel cleaner in one!

To use, rinse your wheels with water, one wheel at a time. Spray a light mist of Pinnacle Gel Wheel Cleaner over the entire wheel and tire surface. Make sure it is cool to the touch and out of direct sunlight. Wait thirty seconds before agitating the gel with a soft wheel brush. Rinse thoroughly and dry with a microfiber towel to prevent water spots.

## Black Onyx Tire Gel

*Create a rich, satin finish that will go the distance.*

Tire dressings typically wear or wash off after only a few days. The initial shine is impressive, but short-lived. For the Pinnacle line, we wanted to create a tire dressing that does more than the status quo and lasts much longer. Pinnacle Black Onyx Tire Gel exceeds our highest expectations.

Black Onyx is a thick, gel formula that clings to the tire surface long enough to cure to the rubber. Liquid dressings sling off or rinse off without ever penetrating the rubber. Black Onyx goes beneath the surface to hydrate the rubber to keep it supple, flexible, and black. It actually revitalizes the rubber to prevent the drying, cracking, and fading associated with older tires. Healthy rubber is less likely to blow out or tear, so Black Onyx is also an additional safety measure.

Once Black Onyx is on your tires, it stays put. The super polymer emulsion used in this remarkable formula resists water and detergents. The gel continues to hold on through puddles and washings. A tire product can't work if it washes off, so we made sure Black Onyx would go the distance. It will last weeks, even through several washings, instead of days.

Best of all, Pinnacle Black Onyx creates a rich, satin finish on your tires that is not greasy or overly shiny. We purposely created a semi-gloss formula because tires should accentuate a well-maintained vehicle, not draw attention away from it. However, if you prefer more shine, Black Onyx can be layered to achieve a glossy effect.

Apply a thin, even coat of Black Onyx to a cool tire using an applicator sponge. Only apply enough to moisten the rubber, and make sure it does not pool around raised letters or around the edge of the wheel. Allow it to cure for an hour before driving.

## Leather & Vinyl Cleaner

*PH balanced formula safely lifts out dirt, grease, and oils.*

Cleaning leather can be risky business if you're using the wrong product. Many cleaners rely on alkaline agents to remove stains, but they also dry out the leather. Like your own skin, leather needs moisture to retain its soft, supple texture. That's why Pinnacle Leather & Vinyl Cleaner is the best solution to clean soiled leather or vinyl upholstery.

Our Leather & Vinyl Cleaner has a neutral pH rating of 7. This matches the natural pH of leather. No alkalinity means no drying or cracking so your leather stays younger longer. This pure cleaner contains no silicone oils, petroleum solvents or gloss agents so it will not discolor your leather, dry it out, or leave a greasy shine. Water-based surfactants and non-alkaline cleaning agents penetrate deep into the leather's pores to remove dirt, grease, and oils, leaving nothing behind but clean leather.

While our emphasis was on leather when developing Leather & Vinyl Cleaner, it works just as well on vinyl. Being synthetic, vinyl has fewer demands than leather. Even so, vinyl benefits from the powerful cleaning agents and water-based surfactants found in this formula. Vinyl seats and surfaces will be clean, but not dried out because there are no harmful petroleum distillates in this cleaner. Be sure to protect vinyl with Pinnacle Vinyl & Rubber Protectant.

Never use a leather cleaner on napped leathers like suede, or on glove soft leather. Leather that has cracked from age or neglect cannot be restored by this or any other known product.

To clean your leather or vinyl, simply apply cleaner with a damp cloth or sponge. Agitate excessively dirty areas with an upholstery brush. Use Leather & Vinyl Cleaner sparingly and do not allow it to dry on the surface. Wipe away excess moisture with a dry towel. Once your leather is clean, you must replenish its natural oils with Pinnacle Leather Conditioner. This will keep it soft and hydrated.

## Leather Cleaner & Conditioner

*Quick, complete leather care in one bottle.*

Until now, complete leather care required two products: one to clean and one to condition. But when time is of the essence, there's no time for two separate bottles. At Pinnacle, we like to save you time without sacrificing quality. This is why we created Pinnacle Leather Cleaner & Conditioner. Arguably, the two-step process is worth every minute, but when minutes are few, you now have an alternative.

To make Pinnacle Leather Cleaner & Conditioner, we took our Leather Cleaner and Leather Conditioner and boiled them down to the essentials. What we were left with was a high-tech emulsion spray made of powerful cleaners and conditioning oils, and a generous touch of strong UV protection. The result is remarkably similar to the results of the two-step process. Your leather will be clean, supple, and protected.

Leather Cleaner & Conditioner underwent a long research and development process, mainly because we had to find a cleaner that wouldn't counteract the nourishing oils in the formula. We found the solution in this gentle, water-based emulsion cleanser. **Without the use of solvents or petroleum distillates, the cleaner is able to lift dirt, stains, and body oil out of the leather.** Meanwhile it infuses the leather with natural moisturizers that are more akin to its natural composition. The UV protectant penetrates the leather's surface to provide long-lasting UV screening, which is important to retain the color and moisture of the leather.

Pinnacle Leather Cleaner & Conditioner is fast-drying and will not leave a greasy shine on your leather. The finish is a satin sheen, like newly processed leather. It even smells like fresh leather!

To use Pinnacle Leather Cleaner & Conditioner, mist the surface of the leather. Massage product into the leather using a microfiber or terry cloth pad. Then wipe the area with a clean microfiber towel. The formula dries quickly.

## Leather Conditioner

*Possibly the world's most lavish leather conditioner!*

Leather care is a two part system. Once it has been cleaned, you must replace essential oils in order to maintain the soft, supple texture and prevent drying and cracking. With Pinnacle Leather Conditioner, we believe we've created the most lavish conditioner you can buy for your valuable leather interior.

The formula in our Leather Conditioner is rich in lanolin and natural oils. These oils absorb into the leather's pores, replacing its natural oils that were lost through processing and subsequent cleaning. Hydrated leather retains its softness and resists cracking caused by overexposure to the sun. The lanolin acts as a natural moisturizer for the hide, just like it works on human skin. Your leather will be left with a soft, satin glow, just like new leather. Leather Conditioner will preserve new leather and rejuvenate older leather that has become stiff.

Because leather is a natural skin, it is sensitive to many of the same things as our own skin. Alkaline products will dry it out and cause premature aging. Leather Conditioner contains no petroleum distillates and will not dry the leather or its stitching. With a neutral pH rating of 7, it perfectly matches the natural pH of leather.

Use Pinnacle Leather Conditioner on vat-dyed or surface-dyed leathers. **Do not use on napped leathers like suede, or on glove soft leather.** Leather that has cracked from age or neglect cannot be restored with this or any other known product.

To use Pinnacle Leather Conditioner, clean the surface with Pinnacle Leather & Vinyl Cleaner first. Apply the conditioner using a small cloth, sponge, or bare hands. Gently massage it into the leather. Allow the conditioner to penetrate for several seconds and then buff the surface with a clean microfiber or terry cloth towel.

## Vinyl & Rubber Protectant

*Shield vinyl and rubber from ultraviolet rays with a satiny coat of protection.*

The vinyl seats, dashboard, and door panels in your vehicle's interior face daily exposure to heat and ultraviolet rays. Over time, the vinyl will dry out, fade, and crack. Sun damage is evident in older vehicles that have had no protection. You can prevent sun damage and give some relief to already damaged vinyl and rubber with Pinnacle Vinyl & Rubber Protectant.

Vinyl & Rubber Protectant is a water-based conditioner that nourishes your interior surfaces so they remain supple and moisturized. It contains no petroleum distillates that can dry out the vinyl over time and cause premature cracking. Natural ingredients combined with high-tech protectants restore the original color and sheen to vinyl and rubber surfaces while shielding them from UV rays.

The satin sheen produced by Vinyl & Rubber Protectant is much like the natural appearance of new vinyl. It has an attractive glow, but not an artificial shine. The coating is non-greasy and will not attract dust like many vinyl dressings, while the natural conditioning oils provide a fresh, clean scent. Your interior will look, feel, and smell great and remain in that condition with regular application of Vinyl & Rubber Protectant.

To apply, spray Vinyl & Rubber Protectant onto a microfiber or terry applicator pad to prevent overspray. Wipe the dash, door panels, vinyl seats, and the rubber door seals to keep them supple. Wipe away excess with a clean towel. Application to tires or hard rubber bumpers may require a few minutes to penetrate.

## Micro Rejuvenator Microfiber Detergent Concentrate

*Don't just wash your microfiber detailing tools - Restore them with Pinnacle Micro Rejuvenator!*

Microfiber is the new terry cloth! Whereas manufacturers and detailers used to recommend terry cloth towels and applicators as the safest, softest fabric to use on delicate clear coat finishes, they are now hailing the incredible cleaning properties of microfiber. It is simply softer, more absorbent, and has greater polishing capabilities than traditional terry cloth. The thick, woven core locks away dirt, liquid, and grease unlike any other material on the market. Because there has never been a material like microfiber before, there has never been a detergent capable of properly cleaning it...until now.

Pinnacle Micro Rejuvenator is not your average detergent. It is formulated specifically to meet the unique demands of microfiber. Since microfiber pulls contaminants deep within its fibers, conventional detergents may not remove all of the stains. Micro Rejuvenator is made specifically to break down stain molecules deep inside the weave and suspend them until the rinse cycle washes them away. Thanks to a powerful degreaser, oily automotive stains don't stand a chance.

We call it Rejuvenator for a good reason. After a wash with Pinnacle Micro Rejuvenator, your microfiber towels and applicator pads will feel as fluffy and soft as they were the day you bought them, even more so. Even after frequent washings, the microfiber will retain its texture and absorption. Laundry detergents may saturate the fibers and flatten the weave. Clean-rinsing Micro Rejuvenator will actually restore your microfiber and make it feel softer with every wash.

Pinnacle Micro Rejuvenator is biodegradable and non-toxic. It works equally well on cotton, chamois, and buffering pads.

Restore your microfiber towels and pads every time you wash them with the detergent formulated specifically for microfiber - Pinnacle Micro Rejuvenator!

## Pinnacle XMT Gel Shampoo & Conditioner

*Clean and condition the paint with every wash!*

Why just wash your car when you can restore the shine? Pinnacle XMT Gel Shampoo & Conditioner cleans your vehicle and enhances it with natural paint conditioners. Your vehicle is left looking shiny, slick, and beautifully clean after every wash.

Make the most of the time you spend washing your vehicle. Pinnacle XMT Gel Shampoo & Conditioner does more than safely wash away grime. It also renews the shine of the existing wax with nourishing oils and polymers. Long after the vehicle is dry, it will have a wet-looking shine.

Pinnacle XMT Gel Shampoo & Conditioner is a fantastic car shampoo by any standards. It releases oil, grease, and dirt from the paint and encapsulates gritty particles to prevent scratching. Pinnacle XMT Gel Shampoo & Conditioner lays down polymers that help safeguard the vehicle while you wash, and they stay behind to create a deep shine.

**The paint will actually be in better condition after you wash!** Pinnacle XMT Gel Shampoo & Conditioner nourishes the paint to make it look fresher and brighter. Conditioning oils reactivate the existing wax to restore a just-waxed shine.

Beyond shine enhancement, Pinnacle XMT Gel Shampoo & Conditioner reduces water spots. The layer of gloss left on the paint promotes water sheeting. Fewer water droplets are left on the vehicle, resulting in faster drying time and fewer water spots.

Pinnacle XMT Gel Shampoo & Conditioner is pH-balanced and does not strip wax or paint sealants. In fact, it leaves a clear layer of polymers to reinvigorate the existing paint protection. Follow up with Pinnacle XMT 360 Spray Wax to further boost the shine and protection.

When washing your vehicle, always follow these simple tips to avoid swirls. Rinse out your wash mitt frequently. Wash from the top down and around. The bottom of the vehicle should be the last area washed. Replace your wash mitt when it becomes rough or worn out. Finally, always use a high lubricity car wash like Pinnacle XMT Gel Shampoo & Conditioner.

## Pinnacle XMT Speed Clay

*Prep your vehicle for maximum shine!*

Pinnacle XMT Speed Clay rids your vehicle of impurities to create the cleanest possible paint finish. This flexible clay bar removes contamination that washing leaves behind, creating a smooth-as-glass surface in preparation for a flawless coat of wax.

If you've never used detailing clay, then you haven't seen your vehicle's true potential! **Fine contaminants firmly lodge in the paint surface, resulting in a gritty texture and patchy appearance.** Rail dust, industrial fallout from factories, and brake dust may be invisible to the naked eye, but their combined effect detracts from the paint's overall gloss because light reflects unevenly off the dirty paint.

Pinnacle XMT Speed Clay safely removes paint impurities. Afterwards, light reflects evenly off every curve of your vehicle. Wax bonds better with the clean paint, and your vehicle feels silky smooth. **Pinnacle XMT Speed Clay leaves automotive paint truly clean.**

This ultra elastic, totally synthetic clay bar is highly flexible, durable, and non-abrasive. It is the easiest and most rewarding way to deep clean automotive paint.

Detailing clay works by mechanically removing visible and invisible contaminants from the paint. As it glides over the finish, clay grabs impurities and traps them. By using a clay lubricant, this process is totally safe and non-abrasive.

After using Pinnacle XMT Speed Clay, your vehicle will feel as smooth as glass and have an improved gloss. Your favorite wax or paint sealant will bond better with the paint, and it may even last longer. Pinnacle XMT Speed Clay can be used on glass and metal, too.

On a clean vehicle, spray a 2 x 2 sq. ft. area with Pinnacle XMT Speed Clay Lube. Gently rub Pinnacle XMT Speed Clay back and forth across the wet area. It will grab initially as it works to remove contamination. When the clay bar glides easily, the paint is clean. Use a microfiber towel to wipe the paint dry. If any clay residue exists, mist the paint again with Pinnacle XMT Speed Clay Lube and wipe dry. Continue this process until you have clayed the entire vehicle. Remember to reshape the clay bar often to reveal a clean portion. After claying, always apply a fresh coat of wax.

[www.pinnaclewax.com](http://www.pinnaclewax.com)

## Pinnacle XMT Speed Clay Lube

*Preserve your vehicle and your detailing clay!*

Pinnacle XMT Speed Clay Lube is an ultra slick lubricant formulated specifically to enhance the performance of detailing clay. The lubricating spray blankets your vehicle in polymers and lubricating agents to prevent scratches.

The secret to detailing clay's safe, non-abrasive performance is the clay lubricant. **Pinnacle XMT Speed Clay Lube is designed to surround and suspend dirt particles to protect the paint from scratches.** The lubricant provides a liquid cushion between the clay bar and the paint, in which the clay bar can glide over the paint easily.

Detailing clay works by mechanically removing visible and invisible contaminants from the paint. As it glides over the finish, clay grabs impurities and traps them. By using Pinnacle XMT Speed Clay Lube, this process is totally safe and non-abrasive. Cleaners try to dissolve impurities with acids. Polishes contain abrasives that may not be necessary. Only detailing clay removes paint contamination safely and quickly with no harm to the paint.

Pinnacle XMT Speed Clay Lube was developed to work hand in hand with Pinnacle XMT Speed Clay. Some soaps are highly alkaline and can dry out the clay. Therefore, soapy water is not a suitable substitute for clay lubricant. Use Pinnacle XMT Speed Clay Lube to maintain the clay's flexibility. The water-based lubricants will not dry out or deteriorate the clay bar. In fact, a light mist of Pinnacle XMT Speed Clay Lube onto the clay bar before storage will keep the clay soft and supple.

Nothing cleans your vehicle like detailing clay. Use Pinnacle XMT Speed Clay and Pinnacle XMT Speed Clay Lube to prepare your vehicle for the ultimate, clean shine.

*On a clean vehicle, spray a 2 x 2 sq. ft. area with Pinnacle XMT Speed Clay Lube. Gently rub Pinnacle XMT Speed Clay back and forth across the wet area. It will grab initially as it works to remove contamination. When the clay bar glides easily, the paint is clean. Use a clean microfiber towel to wipe the paint dry. If any clay residue exists, mist the paint again with Pinnacle XMT Speed Clay Lube and wipe dry. Continue this process until you have clayed the entire vehicle. Remember to reshape the clay bar often to reveal a clean portion. After claying, always apply a fresh coat of wax.*

## Pinnacle XMT Ultra Fine Swirl Remover 1

*Your first line of defense against swirls, dullness, and water spots.*

Correct paint problems without creating new ones. That's the promise of Pinnacle XMT Ultra Fine Swirl Remover.

Clear coats are unbelievably thin. Typically, a clear coat is about the thickness of 2 layers of cellophane wrap, or .015 to .02 inches thick. Fine swirls and haze can begin appearing within months of driving your new vehicle home from the dealership. Hold onto the smooth, showroom finish with Pinnacle XMT Ultra Fine Swirl Remover.

This polish is made with such small abrasives that you can't see them with the naked eye. Millions and millions of these abrasives fill each bottle of Pinnacle XMT Ultra Fine Swirl Remover. The sheer number and minute size of the abrasive particles blend away fine flaws in the clear coat without leaving any trace of surface marring or haze. Just like a fine jeweler's rouge, **XMT's Concentrated Micro Abrasives leave the paint finish glossy and smooth, just like new.**

Applied with a dual action polisher, Pinnacle XMT Ultra Fine Swirl Remover provides just the right balance of abrasive action and conditioning oils to **blend away the first signs of aging.**

Turn back the clock with Pinnacle XMT Ultra Fine Swirl Remover. It's the first step in maintaining your vehicle's shine over its lifetime.

Pinnacle XMT Ultra Fine Swirl Remover can be applied with a polishing pad or a finishing pad. The polishing pad will provide a very light cut to aid the swirl remover in smoothing out rough paint. Pour a quarter-size amount of polish onto the pad and set the polisher at a maximum speed of 4000 OPM. Work the polish in until it starts to dry or disappear. Turn the polisher off and buff the paint with a Cobra microfiber towel. XMT Ultra Fine Swirl Remover has no fillers so you can see the real results of your work immediately. Follow up with XMT 180 High Gloss Carnauba Wax or your favorite Pinnacle wax.

## Pinnacle XMT Fine Swirl Remover 2

*Concentrated Micro Abrasives are the secret to this swirl remover.*

Pinnacle has good news for anyone who wants to correct paint defects at home: You can.

Pinnacle XMT Fine Swirl Remover corrects a wide array of paint imperfections without any need to consult a professional. All you need is a dual action polisher to bring your paint back to showroom perfection.

This mild product is designed to address the most common paint flaws without compromising the clear coat. That includes overspray, light to moderate swirls and scratches, mild oxidation, and water spots. **Erase months or years of damage in one afternoon with Pinnacle XMT Fine Swirl Remover.**

Pinnacle XMT Fine Swirl Remover is a blend of mild abrasives and lubricating oils that remove light to moderate imperfections on aging paint finishes. If your vehicle is not new but has no severe paint damage, this is the swirl remover for you. This product presses rewind on your current paint finish, taking it back to its showroom-new shine.

Pinnacle XMT Fine Swirl Remover contains Concentrated Micro Abrasives, which are smaller than the industry average for a swirl removing compound. The smaller abrasives break down under less heat. Therefore, they are ideal for use with a dual action polisher.

The number and size of these proprietary abrasives enable them to effectively erase surface defects without marring the paint. The abrasives diminish as you polish so the swirl remover in effect becomes a finishing polish. **Pinnacle XMT Fine Swirl Remover leaves the paint silky smooth in one step!**

*Apply XMT Fine Swirl Remover with a polishing pad on your dual action polisher. Pour a quarter-size amount of polish onto the pad and set the polisher at a maximum speed of 4000 OPM. Work the polish in until it starts to dry or disappear. Turn the polisher off and buff the paint with a Cobra microfiber towel. XMT Fine Swirl Remover has no fillers so you can see the real results of your work immediately. Follow up with your favorite Pinnacle wax or with Pinnacle XMT Carnauba Finishing Glaze.*

## Pinnacle XMT Intermediate Swirl Remover 3

*Preserve surface gloss while removing noticeable paint defects – it is possible.*

Swirl removal doesn't require large abrasive particles or an aggressive machine. The truth is that a product loaded with correctly milled, smaller abrasives will do the job with less damage to the paint, thereby shaving a couple of steps off your detailing process.

First, do no harm. Pinnacle XMT Intermediate Swirl Remover works on the principle of doing only what's required to restore the damaged paint. Precisely milled abrasives – and a lot of them – blend away moderate to severe blemishes without removing significant layers of clear coat. Since clear coats are extremely thin, these Concentrated Micro Abrasives preserve as much of the paint as possible while removing only the defects.

Lose the swirls, keep the gloss. Even though Pinnacle XMT Intermediate Swirl Remover is **less abrasive than a traditional compound**, it removes the same imperfections: moderate to severe swirls, moderate scratches, oxidation, water spots, and overspray. The abrasives gradually diminish as they work, giving you a built-in finishing polish. The paint will experience little or no loss of surface gloss. In many cases, you will not need to use a separate finishing polish.

There are some scratches that can only be removed by a professional. If the scratch extends all the way to the color coat, removing the scratch requires leveling the surrounding clear coat and applying new clear coat. Because the removal of deep scratches is risky, Pinnacle XMT Intermediate Swirl Remover is a practical approach to improve and minimize deep scratches. **It is formulated to remove blemishes without jeopardizing the paint system**, so it never cuts too deeply. It's a real world approach to at-home paint care. For those imperfections too severe to be completely removed, XMT Intermediate Swirl Remover will drastically improve their appearance. Once a premium Pinnacle wax is applied, any remaining blemishes will be virtually invisible.

Paint flaws are only skin-deep. Remove noticeable imperfections without removing surface gloss with Pinnacle XMT Intermediate Swirl Remover.

Visit [Pinnaclewax.com](http://Pinnaclewax.com) for complete directions.

## Pinnacle XMT Heavy Duty Swirl Remover 4

*XMT 4 is a cut above all other polishing compounds!*

XMT Heavy Duty Swirl Remover 4 is a true polishing compound with a high concentration of heavy grade abrasives. Concentrated abrasives increase the compound's cutting power with minimal increase in compound haze. XMT Heavy Duty Swirl Remover eliminates your vehicle's worst flaws to begin to restore the depth of color and gloss to even the most neglected paint finishes.

Compounds, by definition, are the most abrasive type of car polish. They work by leveling the paint surrounding a scratch to make the surface smooth again. A compound is a very effective way – and sometimes the only way – to remove severe scratches and heavy oxidation from automotive paint.

**XMT Heavy Duty Swirl Remover 4 is a true compound.** It eliminates oxidation, severe swirls, and scratches with a blend of abrasives, cleaners, and lubricants. The cleaners help remove dead, oxidized paint while the abrasives level scratches and severe swirls. The lubricants minimize hazing, though some hazing is expected and easily removed with a finishing polish.

XMT Heavy Duty Swirl Remover 4 is effective on all kinds of paint, including clear coats. Do not use this product on new or like new paint. We must stress, this is an aggressive compound for severely damaged paint. Always try a less abrasive polish, such as XMT Intermediate Swirl Remover 3, before stepping up to XMT Heavy Duty Swirl Remover 4. XMT 4 is the last hope for rough, oxidized paint.

**XMT Heavy Duty Swirl Remover 4 contains no fillers so you can see the results of your work immediately. This product is body shop safe.**

After compounding, use XMT Intermediate Swirl Remover 3 and a light cutting pad to minimize the compound haze. Next, use XMT Ultra Fine Swirl Remover 1 and a polishing pad to completely eliminate any remaining haze and to restore surface gloss.

If your vehicle's paint flaws are too tough for an ordinary swirl remover, step up to a true polishing compound. XMT Heavy Duty Swirl Remover 4 by Pinnacle eliminates heavy oxidation, severe scratches, and swirls to restore a uniform shine and smooth surface to even the most neglected paint.

Visit [Pinnaclewax.com](http://Pinnaclewax.com) for complete directions.

## Pinnacle XMT 360

*Mirror-like gloss after just one step!*

XMT 360™ by Pinnacle is a revolutionary product that combines correction, cleaning, and sealing into one simple step. This all-in-one wonder eliminates the need to use a separate mild swirl remover, paint cleanser, and sealant, yet you achieve the same depth, gloss, and slickness! XMT 360™ is total car care made easier.

**Corrects.** XMT 360™ does what no mere cleaner wax can do; it removes light swirls and imperfections to leave the paint looking flawless. Ultra fine abrasives – so fine they are not perceptible by sight or touch – gently blend away fine blemishes and visibly smooth the paint. Light spider webbing and water spots vanish. XMT 360™ works like a mild swirl remover but, remarkably, it eliminates the need for a separate cleansing lotion or sealant.

**Cleans.** XMT 360™ contains cleaning agents to remove oxidation and uncover the glossy, vibrant paint underneath. Any type of paint instantly appears deeper, glossier, with more vivid color. XMT 360™ removes dull films and wax build-up to bring new life to the paint.

**Seals.** Besides correcting and cleaning the paint, XMT 360™ deposits a glossy, slick layer of durable polymer protection. XMT 360™ provides months of paint protection against salt, water, industrial pollution, UV rays, insects, and road grime. XMT 360™ is so effective as a sealant, you'd have a tough time distinguishing it from other premium non-cleaning sealants.

XMT 360™ is an absolute time-saver. Go from washing to drying to XMT 360™ and you're done. This user-friendly product does not require buffing. **Polish XMT 360™ until it disappears. It leaves no stubborn haze.** Even when applied in the sun, XMT 360™ is a breeze to apply and remove.

XMT 360™ is designed for application with a buffer. Its thick consistency prevents it from being absorbed into foam pads too quickly. Excellent lubrication provides adequate working time to allow the cleaners and abrasives to do their job. **Once the abrasives have broken down, XMT 360™ literally disappears as you polish.**

## Pinnacle XMT 360 Spray Wax

Dress your vehicle in Xtreme shine with high grade wax protection from a spray!

Simply stunning. That's how you'll describe Pinnacle XMT 360 Spray Wax. There's no easier way to give your paint finish durable protection and a head-turning gloss. Pinnacle XMT 360 Spray Wax packs all the benefits of a traditional carnauba wax into a sizzling spray.

Few liquid waxes capture the essence of a carnauba shine like Pinnacle XMT 360 Spray Wax. XMT's chemist took the building blocks of a great wax - natural carnauba and advanced polymers - and synthesized them into a high-bonding, high gloss spray wax. It sounds complicated but, for you, it couldn't be easier. Just spray on Pinnacle XMT 360 Spray Wax and the paint will instantly look deeper, more vibrant, and wetter. Plus, Pinnacle XMT 360 Spray Wax provides high grade paint protection to keep your vehicle looking sharp.

Pinnacle XMT 360 Spray Wax is a true spray wax, not a quick detailer. This product stands on its own with the protection of carnauba wax plus high-bonding polymers. The paint will be well-protected from UV rays, moisture, and dirt. Once applied to the paint, Pinnacle XMT 360 Spray Wax reduces surface tension to create a dirt-repellent finish. **Dirt and debris literally slide off, keeping your vehicle cleaner.**

Pinnacle XMT 360 Spray Wax makes the paint so slick, you just can't help but touch it! But don't worry. You can wipe away fingerprints and light dust with this high lubricity wax and a soft microfiber towel.

Use Pinnacle XMT 360 Spray Wax as often as desired to enhance and protect the paint finish. After washing, apply Pinnacle XMT 360 Spray Wax to enhance the shine or to reinforce existing wax. Though this wax can stand on its own, it makes an incredible "wax extender". It bonds well to both waxes and paint sealants and extends the life of existing paint protection.

Apply Pinnacle XMT 360 Spray Wax by spraying it onto a clean section of paint. Use a folded microfiber towel to spread the wax over the paint. Flip the towel and buff to a high gloss. Repeat this process until the entire vehicle is waxed. It takes about 10 minutes to wax most vehicles.

## Pinnacle XMT Carnauba Finishing Glaze

Enhance your vehicle with a gentle, high gloss glaze and genuine carnauba protection!

As detailers, we all want that flawless, show car shine, and now we can have it in less time. Pinnacle XMT Carnauba Finishing Glaze is a sophisticated blend of gentle cleaners and rich carnauba wax. The combination is scintillating on any paint finish. You will see depths and hues in your paint that you never knew existed. It's your paint finish, amplified.

Vibrant. That comes just short of explaining the kind of shine we're talking about. What makes the outcome of Pinnacle XMT Carnauba Finishing Glaze so special is the simplicity of achieving it. Exceptional blending technology was used to combine a dynamic shine-enhancing glaze with the king of all natural waxes. The result is pure magic on any paint color.

A glaze is unlike a finishing polish in the fact that glazes do not contain abrasives. They may contain cleaners, like this one, but primarily they serve as a moisturizer for the paint.

Some detailers regard glaze as an optional step and you can tell who they are by their vehicles. Don't believe it. An exceptional glaze, such as XMT Carnauba Finishing Glaze, is essential to achieving the kind of head-turning shine we're all after.

Try Pinnacle XMT Carnauba Finishing Glaze as the finale of your compounding process or, if your paint is already in great shape, use it after washing. The gentle cleaners blend away minor flaws - like spider webbing, haziness, and overall dullness - to increase depth and clarity. At the same time, a layer of carnauba bonds to the paint surface to further enhance the dynamic shine created by the glaze. What can't be removed with the cleaners is filled in with carnauba to create a smooth, flawless finish. **It's perfection and protection in one!**

Apply Pinnacle XMT Carnauba Finishing Glaze using a foam finishing pad. You only need approximately a quarter size amount per 2 ft. section. For easy application, mist the pad with XMT Polishing Pad Conditioner. Work the glaze in at a speed no greater than 4000 OPM on your DA polisher. When the glaze begins to dry or disappear, turn the machine off. Buff off residues with a Cobra microfiber towel. (To prep your vehicle for the best possible finish, use XMT Series swirl removers.)

## Pinnacle XMT 180™ High Gloss Carnauba Paste Wax

Your vehicle will make a 180 degree transformation from dull to dramatic!

XMT 180™ High Gloss Carnauba Wax is a premium paste car wax made with genuine carnauba wax and nourishing oils. **XMT 180's adaptable formula can be applied in the sun or shade and it looks flawless on any paint color.** XMT 180™ High Gloss Carnauba Wax is the perfect finishing touch to complement XMT Series polishes.

XMT 180™ High Gloss Carnauba Wax is made with real Brazilian carnauba wax blended with polymers and nourishing oils, which all work together to create a deep, wet-looking shine with dependable paint protection.

In addition to carnauba's natural resistance to the sun, XMT 180™ High Gloss Carnauba Wax contains **additional UV inhibitors** to protect the paint from damaging rays. UV exposure accelerates paint oxidation, which appears as a dull, chalky layer over the paint. XMT 180™ shields the paint with polymer-fortified carnauba wax so your vehicle remains shiny and smooth.

XMT 180™ High Gloss Carnauba Wax works hand in hand with other XMT Series products to preserve and enhance your vehicle. Use it over XMT Carnauba Finishing Glaze to seal in the shine. **XMT 180™ High Gloss Carnauba Wax contains no cleaners and will not remove any underlying product.**

Layer XMT 180™ High Gloss Carnauba Wax over your favorite paint sealant to further enhance the gloss and depth of the paint. This wax looks excellent on any paint color and any type of paint. Crisp reflections and the unmistakable warmth of carnauba will make any paint color glow. XMT 180™ dries to a clear gloss that makes the paint look instantly deeper and more vibrant.

One of the primary goals of the XMT Series was to create exceedingly user-friendly products. XMT 180™ High Gloss Carnauba Wax wipes on in a smooth, even coat and does not leave any white residue on rubber and vinyl trim. The light haze wipes right off.

**XMT 180™ High Gloss Carnauba Wax can be applied in sun or shade and in climates of high heat and humidity.** The wax dries to a clear gloss, even on a hot vehicle. Enjoy the quality and reflective shine of XMT 180™ High Gloss Carnauba Wax.

## Pinnacle XMT Final Finish Instant Detailer

*Instant shine, any time.*

Nothing shines quite like a freshly applied wax...until now. **Pinnacle XMT Final Finish Instant Detailer recreates the look and feel of a new coat of wax with a proprietary blend of lubricants and Stay-Slick glossifiers.** Why do we call them Stay-Slick? Because they allow your vehicle to stay slick and shiny long after you last applied wax. These glossifying polymers restore a wet look to the paint in an instant.

Pinnacle XMT Final Finish Instant Detailer is loaded with lubricants to protect the paint while you detail. **The lubricants wrap around gritty particles to protect the paint from swirls and scratches.** A gentle wiping action removes light dust and dirt, fingerprints, and smudges. It's the perfect last minute touch-up before a car show or any time you want your vehicle to look its best.

Use Pinnacle XMT Final Finish Instant Detailer after every wash to remove fresh water spots and prevent mineral deposits from etching the paint. When used after washing with Pinnacle XMT Gel Shampoo & Conditioner, this quick detailer is extra insurance against water spots.

**Instant gratification meets long term satisfaction.** Pinnacle XMT Final Finish Instant Detailer contains polymers that bond to and enhance the existing paint protection. Regular use prolongs the life of the wax or sealant. Over time, you'll need to wax less often to maintain that incredible just-waxed shine.

Pinnacle XMT Final Finish Instant Detailer is compatible with all waxes and paint sealants. Use it as part of a total car care regimen including regular washing and waxing.

Renew the look and feel of a freshly waxed finish in an instant with Pinnacle XMT Final Finish Instant Detailer.

*For the best results, always use a microfiber towel with a deep nap. Spray a light mist of Pinnacle XMT Final Finish Instant Detailer onto a section of paint. Use the clean microfiber towel to gently wipe the detailer over the paint. Then flip the towel and buff to a wet-looking gloss. Detail an average sized vehicle in about 5 minutes.*

## Pinnacle XMT Polishing Pad Conditioner

*Protect your paint finish with this conditioning foam & wool pad lubricant.*

When machine polishing, you may have noticed that the pad moves more easily and produces better results several minutes into the session. That's because it takes several minutes for the polish you're using to work its way into the foam (or wool). Up to that point, you're dry buffering your paint finish.

Dry buffering refers to polishing with a dry pad, and it's bad news for your paint. The friction creates fine scratches and dullness that will have to be polished out.

**Prevention of dry buffering is as easy as misting an unused pad with Pinnacle XMT Polishing Pad Conditioner.** It only takes a couple of spritzes to prep the pad for polishing. The rich lubricants instantly penetrate the pad, softening and conditioning the material. Even if the pad has never been used, it will glide across the paint like you're halfway through the detail session.

A pad prepped with Pinnacle XMT Polishing Pad Conditioner is more receptive to polish because the foam's pores open up when the conditioner is introduced. Beyond just wetting the foam, the conditioner's lubricants add extra surface protection during the polishing process. **The lubricants will blend with those that are in the polish to provide excellent protection against micro-marring.**

Pinnacle XMT Polishing Pad Conditioner protects the pad itself, as well as the paint. The friction created by dry buffering can tear the foam or cause it to fray. Pre-moistening the foam reduces friction so the pad doesn't experience any unnecessary roughness. This soft touch is better for the paint, too.

Most importantly, Pinnacle XMT Polishing Pad Conditioner does not interfere with the performance of any polish or wax.

## Pinnacle XMT Polishing Pad Cleaner

*An intense cleaner for all your foam and lambswool pads in a convenient spray bottle.*

Clean pads produce better results, are less likely to mar, and last longer. There is absolutely no downside to cleaning buffering pads and reusing them! Pinnacle XMT Polishing Pad Cleaner is a penetrating cleaner that releases products from foam and wool, and refreshes the texture of the pad. **You'll get more mileage out of your pads and spend less time cleaning them!**

Pinnacle XMT Polishing Pad Cleaner is an intense cleaner formulated specifically for foam and wool pads that are laden with car care products. To understand how this cleaner works, you've got to take a look deep inside the foam, where products accumulate during the detailing process:

Polishes, swirl removers, and compounds all contain oils that serve as lubricants. They have to – otherwise you'd be polishing with a dry pad! If there's one thing we know about oils it is that they are, well, oily. They leave a residue. Even if you rinse the pad immediately after using it, the oily residue remains because oil repels water and vice versa. To truly clean the pad, you have to use a degreasing cleaner.

Pinnacle XMT Polishing Pad Cleaner contains a strong degreasing agent that breaks up oil and eliminates every last trace of residue. Soap (as in dish soap) can leave a residue of its own, so there is no soap in this cleaner. **The only thing you will find in XMT Polishing Pad Cleaner is CLEAN.**

Pinnacle XMT Polishing Pad Cleaner is ready to use in a convenient spray bottle. Each time you change pads as you polish, mist the used pad thoroughly with Pinnacle XMT Polishing Pad Cleaner and set the pad aside. The cleaner will prevent products from drying out and caking in the pad as you work on your vehicle. Once you're done detailing, scrub the pre-soaked pads with a foam conditioning brush. Rinse them in running water to completely remove residues. For the best results, clean the pads right away.
