

Introducing
The **Banana Peel**[™]
Composite Cable
From Belden...

No Jacket... Just Pull and Peel.
It May Very Well Be Nature's Perfect Cable.

Installing Composite Cable To Create The Connected Home Of The Future Just Became Simpler And More Efficient Than Ever.

Belden's Banana Peel composite cable features a unique patent-pending design that's easy to handle, easy to identify, easy to pull and easy to terminate. Just peel the cables off the center spline, and you're in business.

This new cable features a bonded spline to maximize breakout versatility and simplify identification of component cables. The diameter is smaller than other composite cables, improving the overall bend radius for easier installation.

UL-verified Banana Peel cable is available in two configurations: the 2 x 2 version has two coax cables and two Category 5e UTP data cables; the

2 x 2 x 2 format adds two fiber optic cables to the 2 x 2 design.

And because they're made by Belden, you can be sure the performance you pay for is the performance you receive. So you protect your customers' investment — and your reputation.

When it comes to easy, affordable composite cable, we think we have the perfect solution. To find out more, call **1-800-BELDEN-4** or visit us online at www.belden.com.
