

Series 5 Radio Headset

Product Information

Earmark radio headsets are two-way portable radios built into noise-reducing earmuffs. The Series 5 radio headset is the next generation of Earmark radios and represents a significant technological leap forward that provides a superior combination of performance, durability, noise reduction and comfort.

The Series 5 headset is shipped with up to 10 channels pre-programmed into the radio which virtually eliminates the possibility of future frequency contention and allows for multiple channel applications. Powered by 3 NiMH internally housed rechargeable batteries, the Series 5 offers extended operation time and will give audible and visual warnings when battery life is low. Earmark's Series 5 utilizes state of the art construction. The earcups are constructed of "T" grade ABS plastic which provides outstanding durability. The Series 5 easily handles high noise environments with an NRR of 29 that allows teams to stay in constant communication and meets critical hearing protection requirements.

Because comfort is important, the Series 5 offers a sleek, new design that is less streamlined and weighs 18% less than the Earmark Series 4C.

A vertical support strap distributes the weight evenly across the top of your head while a back strap keeps the headset from falling when bending over. The headband pivots easily to allow you to vary the load over the course of the workday. The Series 5 incorporates premium earmuffs that provide the highest combination of comfort and hearing protection possible.

Series 5 controls are designed with the end user in mind. No tools are required to change channels and a shielded toggle switch selects the operating mode, either VOX and PTT or VOX and continuous live microphone. At time of purchase, there is a choice of networks—Simplex, Duplex or Half Duplex. The Series 5 features a detachable, field replaceable microphone that eliminates the need to return the headset for microphone repairs.

Backed by a three year limited warranty and a superior service department, the Series 5 is one of the best investments you can make to improve productivity, reduce costs, provide safety and improve the quality of your finished product.
