

ALLIANCE®

"When Innovation Really Means Improvement"

Since their introduction, SAVAREZ ALLIANCE® strings for the Classical Guitar have proven themselves to be a major preference of guitarists worldwide. Their unique and innovative design qualities make them a popular favorite in creating one's musical expression.

The line of ALLIANCE® strings for the Classical Guitar is the result of major innovations offering new and unprecedented possibilities to guitar players. New improved bass strings enhance the balance of each set and offer longer life, improved projection and enriched tone. Optimal performance is attained through increased power and sound projection with raised length of sound.

KF TREBLE STRINGS - The recently developed high technology fiber (Exclusively produced for SAVAREZ®) has allowed the achievement of Plain KF Strings. Different from nylon and of higher density than polyamide fibers, they enhance traditional string characteristics.

BASS STRINGS - NEW CONCEPT-LONG PLAY - The three ALLIANCE® New Concept wound bass strings have greatly improved. Modifying their design gives them increased sound projection and a richer and brighter tone with higher lasting qualities. Though they are a stiffer string compared to our CORUM® basses, a brilliant, enhanced sustain is gained through easier playing.

SAVAREZ ALLIANCE CLASSICAL SERIES ARE AVAILABLE IN THE FOLLOWING SETS:
