

WeatherNet

Weather On Demand

**The most comprehensive
wireless marine weather resource
on the planet.**

Conveniently Indexed by geographic region and type of product for great ease, speed, and accuracy in choosing products.

Easily Delivered to a variety of interfaces. You choose HF, satellite, cellular or traditional land line devices with one click of a button.

Economical and Efficient with highly compressed data saving you 5 to 10 times the money and time you may currently be spending to get weather products into your hand.

Chart overlays on satellite imagery

Ocean sea temperature, surface height and ice

GRIB data extracted from not just one model but a collection of models best reflecting the meteorological factors in question

NEXRAD radar images of coastal precipitation and weather

Graphical Buoy Charts and text buoy data around the US, Canada, and Europe

Satellite imagery covering every ocean region on earth

Text weather analyses and forecasts for coastal, offshore, and high seas conditions

Weather Charts (WeFax)

How does it work...

WeatherNet consists of three components

The **OCENS Internet robot** continually crawls the Internet updating the local content store of weather data on OCENS' central server. The server is stored in a secure co-location facility with 100% guaranteed network access assuring the user the most complete and up to date repository of weather data anywhere. Note that about one half of the weather products are generated locally and packaged specifically for WeatherNet.

The **OCENS weather server** interacts with the WeatherNet client application running on the users computer. OCENS' server accepts requests for weather data, compresses the data, packs the data into a proprietary data stream specifically designed for wireless data connections, and sends the data to the client application.

The **WeatherNet client application** interacts directly with the user allowing him/her to easily select weather products by adding them to batches, which can be enabled or disabled with the click of a button. The application auto-connects your computer to the OCENS' server via the desired wireless interface and immediately downloads the requested weather. The WeatherNet client then auto-disconnects when the download is complete. No extra seconds waiting for you to manually terminate the connection.

Wireless Interfaces

WeatherNet supports any wireless interface running Windows Dial Up. Simply select your connection!

Supported devices include:

- Cellular phones
- Globalstar satellite phones
- Iridium
- Inmarsat M/F
- SSB/HF Pactor III
- Geosat Solutions
- Generic Internet Connection (Dial up, DSL, ISDN, Broadband)

Pricing

WeatherNet's fee structure is revolutionary. Users simply purchase the software and pay for the weather they download. Each weather product is priced independently and all costs, including estimated air time, are computed prior to the download. Most content is priced between 15 and 25 cents per item. Billing is on a per item basis with no monthly minimum. Downloads are added up and billed to your credit card once per month.

WeatherNet service and software will reduce your connect and download time by a factor of 5-10 for most content, saving you money on your airtime bills, and valuable connect time when using your Pactor modem.

Batch=	Product	Type	Price...
<input checked="" type="checkbox"/>	Download NorthEurope	Surface Pressure	\$0.15
<input checked="" type="checkbox"/>	Download Mobile	Coastal Forecast	\$0.15
<input checked="" type="checkbox"/>	Download Norwegian Sea	SST Fine Resolution	\$0.75
<input checked="" type="checkbox"/>	Download 500 mb analysis	500 mb	\$0.25
<input checked="" type="checkbox"/>	Download Seattle WA radar	Composite Long Ran...	\$0.25
<input checked="" type="checkbox"/>	Download GOES East Visible Image	Visible	\$0.5

5000 conveniently indexed and highly compressed weather products immediately acquired through your choice of wireless delivery devices at the simple click of a button. SET UP YOUR WeatherNet TODAY!

OCENS WeatherStation and SeaStation software add special enhancements boosting the utility of acquired information.
