Adjustable Height Desk Shell Series
Assembly Instructions

Desk Shells with A-6-Silver Electric Lift

Assemble Electric Lift Frame First!

Tools Needed:
Phillips Screwdriver
Power Screwdriver
2 people

1. The width of your electric lift table base is determined by positioning of the sliding horizontal support bars (Long tubes). To adjust, lie the supports on your work surface with the mounting brackets downward and the eight set screws facing upward. By loosening these set screws the horizontal supports can be slid to any width desired within the limitations of the motor wire length. Tightening the set screws will lock the bars into position.

***** When on the final step of connecting the table base to your work surface, you will want to loosen these ***** set screws again to fine tune the base to the desired width appropriate for your particular work surface.

2. Connect the legs to the Long tube supports using eight of the M8x10 screws for each leg. Next, connect the Horizontal tube supports to the Legs also using the M8x10 screws as shown in the diagram.

3. Connect the Feet to the Legs using four M8x24 screws each.

4. Turn the table base upright for connection of the Control holder. Connect the Control holder with four M8x10 screws. The Control box will then slide into the Control holder.

5. Connect one each Motor wire between each motor and into the Control box. Now connect the Handset to the outlet on the control box labeled "control".

Plug in all of the cables
Adjustable Height Desk Shell Series

</table>

1.) Assemble your desk shell once your electric lift base is assembled.

2.) Your desk shell can be used as a standard fixed height desk, or, in this case for your Adjustable Height Desk Shell. Begin by locating the left and right desk side panels and inserting the leveling glides. Then, connect the left and right desk side panels to the desk front panel with the wood dowels, cam locks and cam pins as shown. Now position these three connected pieces in your office where you intend to use the desk.

3.) Set the Electric Lift Table Base within the desk shell with the rear edge of the base feet pushed all of the way back until they meet with the desk shell back panel. Slide the frame apart as far as it will go within the Desk Shell so that the exterior of the base feet touch the side panels. Tighten the width adjustable bolts on the underside of the Electric Lift Table Base.

4.) Connect your power cord and adjust the Electric Lift Table Base up to the height of the desk side panels.

5.) Set the desk worksurface on top of the Electric Lift Table Base and Desk Shell. Do not attach any of the cam pins or dowels to either the underside of the desk worksurface or desk side panels. Make sure the top is aligned evenly with the side panels of the Desk Shell base.

6.) Have a helper hold the desk top in place while from the underside of the Electric Lift Table Base attach the Base to the underside of the desk worksurface with the self threading wood screws provided. DISREGARD ANY THREADED INSERTS. THOSE DO NOT APPLY FOR HEIGHT Adjustable DESKS. YOU ARE MAKING YOUR OWN HOLES WITH THE WOOD SCREWS PROVIDED.

7.) Attach your handset to the front underside of the desk worksurface with the two screws provided in position as desired.

8.) Test out the Electric Lift Table Base and set memories as desired. The electric lift mechanism has a safety stop to stop the unit from lowering when it hits an obstruction such as the desk side panels.
