

TREATING WATER MOLD

in a BAQUACIL®, BAQUACIL® AD™
or BAQUACIL® CDX™ POOL

What is water mold?

- The build up of fungus and slime that attaches to any exposed pool surface.
- Water mold does not cause disease, but its presence is not inviting to swimmers.

Water Mold Develops in stages:

1. Slime found in skimmer, returns, under ladder treads, around steps and in the filter.
2. White, white-gray and/or pink deposits on the pool surface.
3. Shredded tissue-like paper when brushed off surfaces.
4. Large sheet-like growth covering the sides and bottom of the pool.

Causes & prevention of water mold in your pool.

1. Poor Circulation

- Run the circulation/filtration system continuously for a minimum of 8 to 12 hours a day or longer at times of high bather load, bad weather, or when a water clarity problem exists.
- Check the returns on the pool to be sure they are directed slightly downward and away from the skimmer in a circular flow pattern.
- Check the pump timer to make sure it is operating properly and set for a minimum run time of 8 to 12 hours.

2. Poor Filtration

- Check the filter and pressure gauge to ensure they are functioning properly.
- Chemically clean the filter at least two times per season (three times if pool is open year-round) or in the event that the pressure is not significantly reduced by backwashing, bumping, or rinsing the filter.
- Only backwash the filter according to the filter manufacturers' recommendation.

3. Improper Chemical Maintenance

- Maintain BAQUACIL Sanitizer and Algistat level between 30ppm and 50ppm.
- Use your BAQUACIL Test Strips to test weekly. Add a top-up dose if necessary.
- Follow the instructions in your BAQUACIL Care Guide to properly maintain your chemical levels.

4. Contaminated Equipment and Poor Housekeeping

- All equipment that comes in contact with the pool should be cleaned after use and stored away from the environment.
- Brush pool sides and bottom weekly.
- Remove leaves, dirt and other debris from pool.
- Clean the skimmer and hair and lint strainer baskets at least weekly.
- Clean any automatic pool cleaners and covers.

Treatment actions on reverse 

TREATING WATER MOLD
in a **BAQUACIL[®], BAQUACIL[®] AD[™]**
or **BAQUACIL[®] CDX[™] POOL**

Haze rating for a BAQUACIL[®] Pool

- | | |
|---|---|
| 0 = Pool is crystal clear. | 2 = Pool is hazy, main drain or pool bottom is visible. |
| 1 = Pool is clear, but has a dull appearance. | 3 = Pool is hazy, main drain or pool bottom is not visible. |
| | 4 = Pool is hazy, no depth visible. |

Clearing Water Mold in a BAQUACIL Pool:

1. If you have not chemically cleaned your filter within the past month, clean the filter with BAQUACIL D.E. & Cartridge Filter Cleaner or BAQUACIL Sand Filter Cleaner or change the sand.
2. If haze rating was 3 or 4, broadcast floc using BAQUACIL Flocculant per label directions. Vacuum to waste after 24 to 48 hours and continue with the following procedures.
3. Clean lights, ladders, hoses and skimmers to ensure there is no attached mold present.
4. Add BAQUACIL Water Clarifier (BAQUACIL Line Clean) per label directions to the skimmer with filter running.
5. Add BAQUACIL Flocculant as a filter aid per label directions and filter continuously for 24 to 48 hours until pool is clear. Backwash the filter as necessary.
6. Add initial dose of BAQUACIL Oxidizer.
7. Top-up BAQUACIL Sanitizer and Algistat to 50ppm.
8. Perform general housekeeping. Run filter continuously until the water is clear.
9. Chemically clean the filter with BAQUACIL D.E. & Cartridge Filter Cleaner or BAQUACIL Sand Filter Cleaner.

Clearing Water Mold in a BAQUACIL with CDX[™] Pool:

- a. Follow steps 1, 2, 3, 4 and 5 above.
- b. Add start-up dose BAQUACIL Oxidizer – 1 gallon per 10,000 gallons.
- c. Follow immediately with start-up dose BAQUACIL CDX (½ gallon per 10,000 gallons) to the skimmer with the filter running.
- d. Check BAQUACIL Sanitizer level and top-up to 50ppm.
- e. Run filter continuously until the water is clear.
- f. Chemically clean the filter with BAQUACIL D.E. & Cartridge Filter Cleaner or BAQUACIL Sand Filter Cleaner.

Clearing Water Mold in a BAQUACIL AD[™] Pool:

- a. Follow steps 1, 2, 3, 4 and 5 above.
- b. Manually add initial dose of BAQUACIL Oxidizer.
- c. Add a top-up dose of BAQUACIL Sanitizer and Algistat via BAQUACIL AD dispensing unit.
- d. Perform general housekeeping. Run filter continuously until the water is clear.
- e. Chemically clean the filter with BAQUACIL Filter Cleaner, BAQUACIL Sand Filter Cleaner or BAQUACIL D.E. & Cartridge Filter Cleaner

For all systems – if the pool has a history of water mold challenges, remediate and convert to the BAQUACIL CDX System.
