

## Vitamins & Minerals

Essential vitamins and minerals that support overall pet health for every stage of life.

*VitaPet Puppy, VitaPet Adult, and VitaPet Senior are available in Tabs, Powders, and Soft Chews*

*All-In-One is available in Powder and Soft Chews*

### 1) Why are vitamins important for pets?

Vitamins help regulate body processes, protect the body from environmental toxins, and break down nutrients such as carbohydrates, proteins, and fats so the body can utilize them. Vitamins work with minerals and enzymes for digestion, reproduction, muscle and bone growth, and maintenance of healthy skin and coat. The NaturVet line of pet vitamins is veterinarian formulated for all life stages.

### 2) What is the difference in the vitamins for the different life stages?

Nutritional needs are different for all stages in a dog's life: puppy, adult, and senior. Our high quality formulations address and support the specific life stage needs.

### 3) What vitamins are important for puppies?

Puppies develop at a very fast rate putting additional nutritional demands on their bodies. Supplementing with vitamins may help ensure that growing puppies get what their bodies need for healthy tissue, strong bones, and overall good health.

### 4) What vitamins are important for seniors?

Aging dogs also have special nutritional needs that can be supplied in the form of supplements. Older dogs may develop joint issues such as arthritis and greatly benefit from ingredients such as glucosamine.

### 5) I buy a good brand of dog food. Why does my dog need added vitamins?

The processes used to bake, extrude, and cook commercial pet food can destroy much of the nutritional value. The addition of vitamin and mineral supplements will help pets maintain optimum health levels through all of their life stages.

## Vitamins & Minerals Key Ingredients:

**Vitamin C** - Supports a normal immune system, works as an anti-oxidant and helps normal manufacturing of collagen.

**Glucosamine HCl** - A nutrient which helps support normal joint health.

**Manganese** - A component in many enzyme processes of the body. Essential for the normal production of joint fluid and keeping the cartilage surface in joints lubricated.

**Vitamin B-12** - A water soluble vitamin with a key role in the normal functioning of the brain and nervous system, and for the formation of blood.

**Niacin** - A water-soluble vitamin: one of between 40 and 80 essential human nutrients.

**Zinc** - A component of more than 200 enzymes in the human and animal bodies. Zinc helps provide normal support for tissues including skin and joints.

**Calcium** - Essential for living organisms, in particular in cell physiology, and a major material used in mineralization of bone, teeth and shells.

**Linoleic Acid** - Omega-6 fatty acid. Deficiency symptoms include dry hair, hair loss, and poor wound healing.
