

Xtreme Machine Technology

Pinnacle's long history of quality car care products is beginning a new chapter with XMT Series, a collection of products designed to optimize machine application.

The method of car care has changed over the years. Now, instead of buffing tirelessly by hand, enthusiasts are turning to machine buffers to achieve the perfect shine. XMT, or Xtreme Machine Technology, Series is designed for a growing generation of car care fanatics who enjoy the performance and unparalleled results of power polishers.

Each XMT Series product is formulated to take full advantage of machine application. Unique emollients, engineered lubricants, and Concentrated Micro Abrasives are just a few of the ways XMT Series is setting a new standard for machine-applied products.

All XMT Series products are formulated in Florida, the home of Pinnacle Natural Brilliance. Intense heat and humidity are constant challenges here. That's why all XMT products are created to work as promised in the sun or shade.

Pinnacle is dedicated to preserving your vehicle and the environment. Pinnacle XMT products are VOC compliant and silicone-free. Plus, XMT swirl removers are body-shop safe.

I am proud to bring you some of the most user-friendly, machine-applied car care products ever. XMT Series combines Pinnacle's quality with the latest machine technology to create practical products that deliver fantastic results.

I have personally tested each XMT product with various dual action and rotary polishers and I'm confident that you will share my enthusiasm once you try Pinnacle XMT Series on your own vehicle.

Polishing Pad Conditioner

Protect your paint finish with this conditioning foam and wool pad lubricant.

When machine polishing, you may have noticed that the pad moves more easily and produces better results several minutes into the session. That's because it takes several minutes for the polish you're using to work its way into the foam (or wool). Up to that point, you're dry buffing your paint finish.

Dry buffing refers to polishing with a dry pad, and its bad news for your paint. The friction creates fine scratches and dullness that will have to be polished out.

Prevention of dry buffing is as easy as misting an unused pad with Pinnacle XMT Polishing Pad Conditioner. It only takes a couple of spritzes to prep the pad for polishing. The rich lubricants instantly penetrate the pad, softening and conditioning the material. Even if the pad has never been used, it will glide across the paint like you're halfway through the detail session.

A pad prepped with Pinnacle XMT Polishing Pad Conditioner is more receptive to polish because the foam's pores open up when the conditioner is introduced. Beyond just wetting the foam, the conditioner's lubricants add extra surface protection during the polishing process. The lubricants will blend with those that are in the polish to provide excellent protection against micro-marring.

Pinnacle XMT Polishing Pad Conditioner protects the pad itself, as well as the paint. The friction created by dry buffing can tear the foam or cause it to fray. Pre-moistening the foam reduces friction so the pad doesn't experience any unnecessary roughness. This soft touch is better for the paint, too.

Most importantly, Pinnacle XMT Polishing Pad Conditioner does not interfere with the performance of any polish or wax.

Ultra Fine Swirl Remover 1

XMT
Series

Your first line of defense against swirls, dullness and water spots.

Correct paint problems without creating new ones. That's the promise of Pinnacle XMT Ultra Fine Swirl Remover.

Clear coats are unbelievably thin. Typically, a clear coat is about the thickness of 2 layers of cellophane wrap, or .015 to .02 inches thick. Fine swirls and haze can begin appearing within months of driving your new vehicle home from the dealership. Hold onto the smooth, showroom finish with Pinnacle XMT Ultra Fine Swirl Remover.

This polish is made with such small abrasives that you can't see them with the naked eye. Millions and millions of these abrasives fill each bottle of Pinnacle XMT Ultra Fine Swirl Remover. The sheer number and minute size of the abrasive particles blend away fine flaws in the clear coat without leaving any trace of surface marring or haze. Just like a fine jeweler's rouge, XMT's Concentrated Micro Abrasives leave the paint finish glossy and smooth, just like new.

Applied with a dual action polisher, Pinnacle XMT Ultra Fine Swirl Remover provides just the right balance of abrasive action and conditioning oils to blend away the first signs of aging.

Turn back the clock with Pinnacle XMT Ultra Fine Swirl Remover. It's the first step in maintaining your vehicle's shine over its lifetime.

Pinnacle XMT Ultra Fine Swirl Remover can be applied with a polishing pad or a finishing pad. The polishing pad will provide a very light cut to aid the swirl remover in smoothing out rough paint. Pour a quarter-size amount of polish onto the pad and set the polisher at a maximum speed of 5000 OPM. Work the polish in until it starts to dry or disappear. Turn the polisher off and buff the paint with a Cobra microfiber towel. XMT Ultra Fine Swirl Remover has no fillers so you can see the real results of your work immediately. Follow up with Pinnacle Signature Series II or your favorite Pinnacle wax.

Fine Swirl Remover 2

Concentrated Micro Abrasives are the secret to this swirl remover's success.

Pinnacle has good news for anyone who wants to correct paint defects at home: You can.

Pinnacle XMT Fine Swirl Remover corrects a wide array of paint imperfections without consulting a professional. All you need is a dual action polisher to bring your paint back to showroom perfection.

This mild product is designed to address the most common paint flaws without compromising the clear coat. That includes overspray, light to moderate swirls and scratches, mild oxidation, and water spots. **Erase months or years of damage in one afternoon with Pinnacle XMT Fine Swirl Remover.**

Pinnacle XMT Fine Swirl Remover is a blend of *mild abrasives and lubricating oils* that remove light to moderate imperfections on aging paint finishes. If your vehicle is not new but has no severe paint damage, this is the swirl remover for you. This product presses rewind on your current paint finish, taking it back to its showroom-new shine.

Pinnacle XMT Fine Swirl Remover contains Concentrated Micro Abrasives, which are smaller than the industry average for a swirl removing compound. The smaller abrasives break down under less heat. Therefore, they are ideal for use with a dual action polisher.

The number and size of these proprietary abrasives enable them to effectively erase surface defects without marring the paint. The abrasives diminish as you polish so the swirl remover in effect becomes a finishing polish. **Pinnacle XMT Fine Swirl Remover leaves the paint silky smooth in one step!**

Apply XMT Fine Swirl Remover with a white polishing pad on your dual action polisher. Pour a quarter-size amount of polish onto the pad and set the polisher at a maximum speed of 5000 OPM. Work the polish in until it starts to dry or disappear. Turn the polisher off and buff the paint with a Cobra microfiber towel. XMT Fine Swirl Remover has no fillers so you can see the real results of your work immediately. Follow up with your favorite Pinnacle wax or with Pinnacle XMT Carnauba Finishing Glaze.

If your vehicle has moderate to severe imperfections, use Pinnacle XMT Intermediate Swirl Remover. This advanced swirl remover blends away noticeable flaws without reducing surface gloss.

Intermediate Swirl Remover 3

Preserve surface gloss while removing noticeable paint defects – it is possible.

Swirl removal doesn't require large abrasive particles or an aggressive machine. The truth is that a product loaded with correctly milled, smaller abrasives will do the job with less damage to the paint, thereby shaving a couple of steps off your detailing process.

First, do no harm. Pinnacle XMT Intermediate Swirl Remover works on the principle of doing only what's required to restore the damaged paint. Precisely milled abrasives – and a lot of them – blend away moderate to severe blemishes without removing significant layers of clear coat. Since clear coats are extremely thin, these Concentrated Micro Abrasives preserve as much of the paint as possible while removing only the defect.

Lose the swirls, keep the gloss. Even though Pinnacle XMT Intermediate Swirl Remover is **less abrasive than a traditional compound**, it removes the same imperfections: moderate to severe swirls, moderate scratches, oxidation, water spots, and overspray. The abrasives gradually diminish as they work, giving you a built-in finishing polish. The paint will experience little or no loss of surface gloss. In most cases, you will not need to use a separate finishing polish.

Keep it real. There are some scratches that can only be removed by a professional. If the scratch extends all the way to the color coat, removing the scratch requires removing the entire clear coat surrounding the scratch. **Pinnacle XMT Intermediate Swirl Remover is formulated to remove blemishes without jeopardizing the paint system.** It's a real world approach to at-home paint care. For those imperfections too severe to be completely removed, XMT Intermediate Swirl Remover will drastically improve their appearance. Once a premium Pinnacle wax is applied, any remaining blemishes will be virtually invisible.

Paint flaws are only skin-deep. Remove noticeable imperfections without removing surface gloss with Pinnacle XMT Intermediate Swirl Remover.

Carnauba Finishing Glaze

Enhance your vehicle with a gentle, high gloss glaze and genuine carnauba protection!

As detailers, we all want that flawless, show car shine, and now we can have it in less time. Pinnacle XMT Carnauba Finishing Glaze is a sophisticated blend of gentle cleaners and rich carnauba wax. The combination is scintillating on any paint finish. You will see depths and hues in your paint that you never knew existed. It's your paint finish, amplified.

Vibrant. That comes just short of explaining the kind of shine we're talking about. What makes the outcome of Pinnacle XMT Carnauba Finishing Glaze so special is the simplicity of achieving it. Exceptional blending technology was used to combine a dynamic shine-enhancing glaze with the king of all natural waxes. The result is pure magic on any paint color.

A glaze is unlike a finishing polish in the fact that glazes do not contain abrasives. They may contain cleaners, like this one, but primarily they serve as a moisturizer for the paint.

Some detailers regard glaze as an optional step and you can tell who they are by their vehicles. Don't believe it. **An exceptional glaze, such as XMT Carnauba Finishing Glaze, is essential to achieving the kind of head-turning shine we're all after.**

Try Pinnacle XMT Carnauba Finishing Glaze as the finale of your compounding process or, if your paint is already in great shape, use it after washing. The gentle cleaners blend away minor flaws - like spider webbing, haziness, and overall dullness - to increase depth and clarity. At the same time, a layer of carnauba bonds to the paint surface to further enhance the dynamic shine created by the glaze. What can't be removed with the cleaners is filled in with carnauba to create a smooth, flawless finish. **It's perfection and protection in one!**

Apply Pinnacle XMT Carnauba Finishing Glaze using a foam finishing pad. You only need approximately a quarter size amount per 2 ft. section. For easy application, mist the pad with XMT Polishing Pad Conditioner. Work the glaze in at a speed no greater than 5500 OPM on your DA polisher. When the glaze begins to dry or disappear, turn the machine off. Buff off residues with a Cobra microfiber towel.

To prep your vehicle for the best possible finish, use XMT Series swirl removers.

Polishing Pad Cleaner

An intense cleaner for all your foam and lambswool pads in a convenient spray bottle.

XMT
Series

Clean pads produce better results, are less likely to mar, and last longer. There is absolutely no downside to cleaning buffer pads and reusing them! Pinnacle XMT Polishing Pad Cleaner is a penetrating cleaner that releases products from foam and wool, and refreshes the texture of the pad. **You'll get more mileage out of your pads and spend less time cleaning them!**

Pinnacle XMT Polishing Pad Cleaner is an intense cleaner formulated specifically for foam and wool pads that are laden with car care products. To understand how this cleaner works, you've got to take a look deep inside the foam, where products accumulate during the detailing process:

Polishes, swirl removers, and compounds all contain oils that serve as lubricants. They have to - otherwise you'd be polishing with a dry pad! If there's one thing we know about oils it is that they are, well, oily. They leave a residue. Even if you rinse the pad immediately after using it, the oily residue remains because oil repels water and vice versa. To truly clean the pad, you have to use a degreasing cleaner.

Pinnacle XMT Polishing Pad Cleaner contains a strong degreasing agent that breaks up oil and eliminates every last trace of residue. Soap (as in dish soap) can leave a residue of its own, so there is no soap in this cleaner. **The only thing you will find in XMT Polishing Pad Cleaner is CLEAN.**

Pinnacle XMT Polishing Pad Cleaner is ready to use in a convenient spray bottle. Each time you change pads as you polish, mist the used pad thoroughly with Pinnacle XMT Polishing Pad Cleaner and set the pad aside. The cleaner will prevent products from drying out and caking in the pad as you work on your vehicle. Once you're done detailing, scrub the pre-soaked pads with a foam conditioning brush. Rinse them in running water to completely remove residues. For the best results, clean the pads right away.
