

# TEAR DROP INSTALLATION PROCEDURES

1. Unpack the Flutter Flagpole, pole extension kit and the flag.

2. Remove the Black Cap from the end of the Flutter Flagpole and replace it with the mushroom cap from the pole extension kit.

3. Extend the Flutter Flagpole so that the two segments are about 2-3 feet extended. You can adjust later if needed.

**DO NOT OVERTIGHTEN!!  
PLASTIC THREADS MAY STRIP**

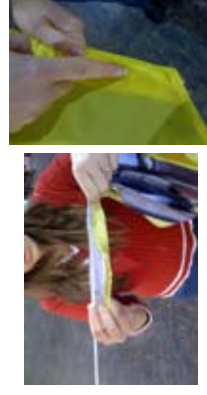

4. Insert the shorter of the two pieces from the Pole Extension Kit (approx 2' piece) into the Mushroom Cap.

5. Insert the longer of the two pieces from the Pole Extension Kit (approx 4' piece) into the silver coupling of the shorter rod.

6. Place the Retention Ring/Eye Bolt thru the bottom of the flagpole. Temporarily tighten about 2' from bottom of pole.

7. Slide the extension rods and flagpole thru the pole sleeve of the flag. **MAKE SURE** that the tip of the rod is in the reinforced pocket at the end of the pole sleeve!!

8. Pull the flag down to create the curve in the flag. You do not need to have extremely tight, just enough to hold the curve. Adjust the Retention Ring and connect the grommet and Retention ring with the snap hook

9. Shown is the completed Tear Drop Flag.

**NOTE: There may be extra parts, these are for different flag setups**
