

Same-Day Transfection using GenePORTER® 3000 Transfection Reagent

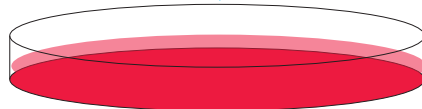

1. Plate log-phase cells in complete medium and incubate at 37°C in 5% CO₂ for 30 minutes.

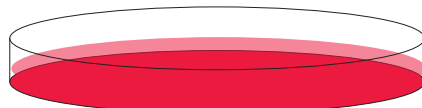

2. During incubation, prepare GenePORTER 3000 lipoplexes.

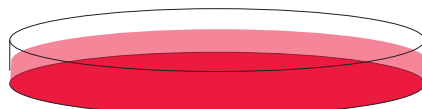

3. Remove complete medium. Replace with a equal volume of serum-free medium. Add GP3K lipoplexes.

4. Incubate cells for 4 hours

5. Add equal transfection volume complete medium with 20% serum.

6. Assay after 24-72 hours.
