

Wireless Nurse Call Systems Notification Center RC200PC

Includes RATH® PC, Monitor, Keyboard, Mouse, Speakers, Router, POE Switch, and All Cables Needed
***Does not include RC200M SmartAlert Software**

Description:

The RC200PC Notification Center hosts the SmartAlert Software (RC200M) and can either be a stand-alone solution or go on your Local Network (LAN). The Notification Center typically goes at the main Nurses' Station and allows staff to see alerts in real time and manage calls, staff, and resident information. When a call is placed it will appear on the Notification Center screen and the speakers will make a tone (as long as the volume is turned up). The PC can connect to the Wireless Gateway for SmartAlert Wireless Systems, SmartCare Host Controller for hardwired integration, Pocket Paging transmitter for Pocket Paging notification, or a combination of all three.
