

Xcluder® Garage Door Rodent Shield

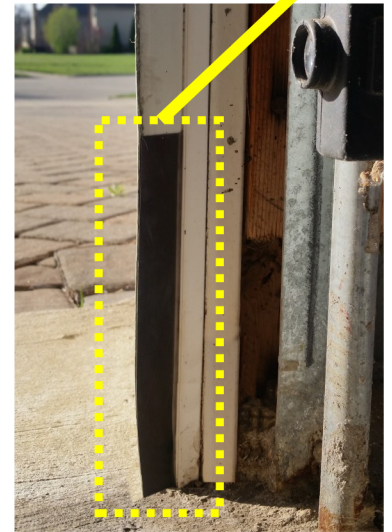

Rodent Proofing for Your Garage Door

Item# 162940, 162942, 162944, 162946, 162948

Designed to fit both commercial and residential molding/insulation Seals.

Gaps and the holes around garage doors (both residential and commercial) are a common entry point for mice, rats and chipmunks. As we know, many of these holes are caused by either weather corrosion or rodents chewing and gnawing on the side seals. These side seals are known in the industry as Garage Door Stop Molding and they are the decorative insulation seals located on the side of a garage door. Typically these seals are made of a medium-weight rubber, making them an easy victim for a rodents persistent gnawing. And once inside the garage, those rodents will continue to cause more destruction by nesting, chewing, foraging and defecating.

Xcluder Garage Door Rodent Shields (GDRS) are made from a sheet of high quality stainless steel and are easily applied to the base of the rubber insulation seal. The stainless steel provides an impenetrable barrier for any pest. The GDRS adheres to the inside of the garage so it is not visible from the outside therefore no painting required. When the Xcluder Garage Door Rodent Shields are used in conjunction with Xcluder Garage Door Seals, the area around the garage door will be completely secured from any pest invasion.

Item #	# of Pieces
162940	2
162942	4
162944	24
162946	50
162948	200

Features -

- 2 x 8" x 1" strips of adhesive backed 300 series stainless steel.
- .005" thickness of material making it perfect for installation on the inside surface of the garage door side seal – Photo
- Installation should take no more the 5 minutes for the entire garage.

Benefits-

- Rodents cannot gnaw through the sides of your garage door- protecting pet food, bird seed etc.
- Made of high quality stainless steel so it will not rust. It is also weather and corrosion resistant.
- Installation on the inside of weather strip so no painting or covering is required. –
- Peel and stick adhesive backing—No tools needed
- An inexpensive solution to a common rodent problem around households.
- One size fits all. No need to measure or trim.
