

UPR Oil Catch Can Installation

15-19 FORD F150 5.0 PLUG N PLAY CATCH CAN

1. The F-150 will have a hole on the battery box lip that is used for a wiring harness retaining clip. Remove the clip from the hole and mount the catch can in this location using the supplied Allen head bolt, nut and washers. Leave the catch can mount loose at this time, so you can adjust the positioning of the catch can. You will need a 5/32 Allen key and 7/16 wrench to tighten once you are satisfied with the installation
2. Locate the factory PCV hose that runs from the passenger valve cover PCV valve to the intake manifold vacuum port. Remove the factory fittings by pushing the grey buttons on the fittings and lift the hose off.
3. The outlet on the Catch Can will be indicated by a silver marker at the end of the barrel of the fitting. This is the 'Clean side'. Connect the longer hose to this fitting, and connect the other end to the vacuum port on the intake manifold. * If you selected to add the check valve to your kit, the arrow on the check valve in this hose will face away from the catch can, towards the engine.
4. Connect the 'Dirty side' hose with the 90 degree bend in it to the PCV valve on the valve cover. The other end of the hose will connect to the remaining fitting on the catch can. The hose should run along the valve cover towards the battery box, then up to the catch can fitting as shown in the pictures below.
5. Tighten the catch can mount and bracket. Go back and check all connections.

Check your catch can every 500 miles for the first few oil changes to get to know your vehicles Oil consumption. **Never return collected oil back into the engine.**

Always check and drain the catch can more often in winter / freezing weather. If the water/oil mixture in the catch can is allowed to freeze it will cause damage to the catch can and internal components. Any damage due to freezing is NOT WARRANTY.
