

Billet Three or Four Button Remote Case Instructions

Tools:

Flat head screw driver, allen wrench (provided)

Parts:

- (1) Billet front remote case
- (1) Plastic back remote case
- (2 or 4) Allen head screws

Estimated Time:

5 minutes

Directions:

1. First remove your factory remote from the key ring.
2. Using a flat head screw driver with a thin flat blade separate the two halves of the factory remote.
3. Once separated transfer the battery from the factory remote to the new remote back making sure the battery is facing the same way.
4. Next remove the button pad and circuit board from the front of the factory remote (it comes out in one piece).
5. Press the button pad into the new billet remote case, as you do this make sure that the buttons line up properly with the openings in the case.
6. Now put the two halves together and secure with the two or four allen headed screws provided (depending on the version you have you will need two or four allen head screws).
7. Test remote and install back on to key chain.
