Please post this in your sterilization room

Dental Low Speed E-Type Attachment Maintenance Instructions

1. SCRUB
   - Remove the attachment from coupler or tubing and remove bur.
   - Close the chuck on straight attachments.
   - Scrub the attachment with a fine wire brush or a soft brush under running water to remove “bio burden”.
   - Wipe and dry with paper towel.

2. SPRAY
   - Using the correct lubrication nozzle, spray MK-dent Premium Spray Lubricant and Cleaner into the back end after every use.
   - Spray for approximately 2 seconds.

3. EXPEL
   - Connect the attachment (with head, without bur) to the motor and loosely cover front end with paper towel.
   - Run the attachment for 10-15 seconds with the head down to expel debris and excess lubricant. Wipe off excess lubricant with alcohol.
   - Repeat process until fluid comes out clear.
   - **Note:** Use pure rubbing alcohol only when wiping off excess lubricant.
   - Many over-the-counter alcohol wipes have other solutions added to them. This can cause spotting of the exterior and severe damage to the internal parts of the handpiece.

4. REMOVE
   - Remove head from the attachment. Wipe off excess lubricant.
   - For straight nosecones, make sure the chuck collars are in the closed position before sterilizing.
   - **Note:** For automatic purging stations, you can skip step #2 and #3.
   - Please follow manufacturer’s recommended maintenance instructions.

5. STERILIZE
   - Do not re-assemble head to attachment prior to sterilization.
   - Insert attachment into pouch, bag, or wrap.
   - Follow sterilizer manufacturer’s instructions for autoclave/chemclave.
   - **Note:** Never remove components from sterilizer until drying cycle has ended.

6. ALLOW TO COOL
   - Remove the attachment from the sterilizer and let them cool to room temperature.
   - **Note:** Never cool handpieces under running water or by covering/wrapping with a wet cloth.

**LUBRICATION TOOLS**

- LT1023 E-type Low Speed Handpiece Lubrication Tool
- LT1030 E-type Lubrication Tool
- LT1050 and MK-dent Lubricant and Cleaner

**Prices:**

- LT1030 E-type Connection Lubrication Tool: $8.90
- MK-dent LU1011 Synthetic Lubricant and Cleaner: $29.00
