

## Installing Deadbolt

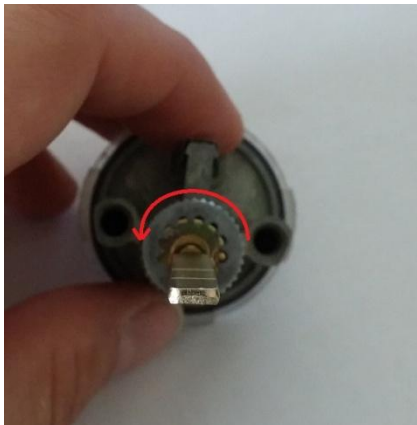

When installing the single cylinder deadbolt, first determine which direction the deadbolt latch will be facing.

If latch is facing to the right, then you will need to rotate the deadbolt spindle clockwise until it stops before installing it through the door.

If the latch is facing to the left, then you will need to rotate the deadbolt spindle counter clockwise until it stops before installing it in the door.

### Symptoms of Incorrectly Installed Deadbolt

Deadbolt locks but key cannot be returned to original position to remove the key.

Interior turn button will only turn deadbolt latch if key is in the front of the door.
